

Monitors and Automatically Alarms as Vessel Levels Change

Works with a Variety of Point Level Indicators

- Diaphragm / Pressure Switch
- Rotary Paddle
- Tilt Switch
- Capacitance Probe
- Vibrating Rod

The BinMaster Point Level Alarm Panel is designed to alert the user to vessel level conditions via a blinking LED light and an audible alarm, saving time and eliminating the need to manually inspect vessel levels. Level indicators – such as a diaphragm switch, rotary paddle, tilt switch, capacitance probe or vibrating rod – are placed strategically at desired points in each vessel, enabling the user to be automatically notified when a bin reaches a full, partially full, or empty level. The alarm panel can also be connected to an external horn or siren to provide alert status from a variety of locations throughout a facility.

The alarms are activated as product comes into contact with the level indicator or falls away from a level indicator. These alarms cause the LED light to blink and an audible alarm to sound from the panel. When the user presses the "acknowledge" button, the LED stops blinking and

Point Level Alarm

turns solid. When the material in the bin drops below the level indicator as a vessel is emptied or comes back into contact with the level indicator as a vessel is filled, the LED on the panel goes out altogether and the panel automatically resets – and is ready to receive the next alarm signal.

Consolidating information at a convenient centralized location, the Point Level Alarm Panel is available with four to 24 vessel level indicator stations, making it capable of monitoring high and low status for two to 12 separate vessels from a single panel. If desired, an alarm panel may be configured for more than two readings from a single vessel, such as to add a partially full status to be read from additional level indicators placed at other points on a vessel.
