Biodegradable Polymers In Clinical Use And Clinical Development:

Biodegradable Polymers in Clinical Use and Clinical Development Abraham J. Domb, Neeraj Kumar, 2011-05-12

This book focuses on biodegradable polymers that are already in clinical use or under clinical development. Synthetic and natural polymers will be included. This excludes polymers that have been investigated and did not reach clinical development. The purpose of this book is to provide updated status of the polymers that are in clinical use and those that are now being developed for clinical use and hopefully will reach the clinic during the next 5 years. The book provides information that is of interest to academics and practicing researchers including chemists, biologists, and bioengineers and users: physicians, pharmacists.

Applications of Biodegradable and Bio-Based Polymers for Human Health and a Cleaner Environment Iuliana Stoica, Omari Mukbaniani, Neha Kanwar Rawat, A. K. Haghi, 2021-12-22. The world faces significant challenges as the population and consumption continue to grow while nonrenewable fossil fuels and other raw materials are depleted at ever increasing rates. This informative volume provides a technical approach to address these issues using green design and analysis. It takes an interdisciplinary look at concepts that can be applied across engineering disciplines in the development of products, processes, and systems to minimize environmental impacts across all life cycle phases. Topics include polymers for pollutant removal, wood-based biopolymers, bio-based polymers for drug formulations, biomaterial-based medical implants, biodegradability of biopolymer materials, bio-based polymers for food packaging applications, biodegradable polymers for tissue engineering applications, and more.

Biomaterials in Clinical Practice Fatima Zivic, Saverio Affatato, Miroslav Trajanovic, Matthias Schnabelrauch, Nenad Grujovic, Kwang Leong Choy, 2017-10-20. This book covers the properties of biomaterials that have found wide clinical applications while also reviewing the state of the art in the development towards future medical applications, starting with a brief introduction to the history of biomaterials used in hip arthroplasty. The book then reviews general types of biomaterials: polymers, ceramics, and metals, as well as different material structures such as porous materials and coatings and their applications, before exploring various current research trends such as biodegradable and porous metals, shape memory alloys, bioactive biomaterials, and coatings, and nanometals used in the diagnosis and therapy of cancer. In turn, the book discusses a range of methods and approaches used in connection with biomaterial properties and characterization: chemical properties, biocompatibility, in vivo behaviour, characterisation, as well as genotoxicity and mutagenicity, and reviews various diagnostic techniques: histopathological analysis, imaging techniques, and methods for physicochemical and spectroscopic characterization. Properties of stent deployment procedures in cardiovascular surgeries, from aspects of prediction, development, and deployment of stent geometries, are presented on the basis of novel modelling approaches. The last part of the book presents the clinical applications of biomaterials together with case studies in dentistry, knee and hip prosthesis. Reflecting the efforts of a multidisciplinary team of authors: chemical engineers, medical doctors, physicists, and engineers, it presents a rich blend of perspectives on the application of biomaterials in clinical

practice The book will provide clinicians with an essential review of currently available solutions in specific medical areas also incorporating non medical solutions and standpoints thus offering them a broader selection of materials and implantable solutions This work is the result of joint efforts of various academic and research institutions participating in WIMB Tempus project 543898 TEMPUS 1 2013 1 ES TEMPUS JPHES Development of Sustainable Interrelations between Education Research and Innovation at WBC Universities in Nanotechnologies and Advanced Materials where Innovation Means Business co funded by the Tempus Programme of the European Union

Handbook of Sustainable Polymers Vijay Kumar Thakur, Manju Kumari Thakur, 2016-04-27 Sustainable polymers play an indispensable role in the emergence of green materials and the 21st century is an era of sustainable polymeric materials Sustainable polymer based materials have attracted considerable interest because of the energy crisis and ecological concerns as well as the potential to substitute certain petroleum derived materia
