Biofuels Food Security And Developing Economies:

Biofuels, Food Security, and Developing Economies Nazia Mintz-Habib, 2016-01-08 The last decade has witnessed major crises in both food and energy security across the world. One response to the challenges of climate change and energy supply has been the development of crops to be used for biofuels. But as this book shows, this can divert agricultural land from food production to energy crops, thus affecting food security, particularly in less developed countries. The author analyses the extent to which biofuels feedstocks fit within the national food security strategy, agro export orientation and rural development plans and policies of developing economies. Two case studies from Tanzania in East Africa and Borneo in Malaysia are considered in detail, using the non-edible crop of jatropha as an example of how compromises can be reached to balance food and energy goals as well as export markets. The author develops a novel integrated approach: the Institutional Feasibility Study as the basis of her analysis. She addresses key issues such as how do global initiatives for green growth, energy security and sustainable development incorporate biofuels industry development? Does global biofuels trade present meaningful foreign and local investment opportunities for developing countries? To what extent does biofuels feedstock production help with poverty reduction and agricultural sector modernization? What role do the EU and the US commitments to biofuels blending targets play in the rapid industry development in developing countries? How does the biofuels industry fit within existing formal and informal institutional frameworks? Who are the winners and losers in the biofuels global value chain?

Food Security and Development Udaya Sekhar Nagothu, 2014-11-13 The global food system is characterized by large numbers of people experiencing food insecurity and hunger on the one hand, and vast amounts of food waste and overconsumption on the other. This book brings together experiences from different countries addressing the challenges associated with food security. Seen through various disciplinary lenses, the different cases included are countries at various stages of food security with diverse stories of success as well as failures in their efforts. China, Brazil and India, as well as less developed countries in Africa and Asia such as Malawi, Ethiopia, Tanzania, Myanmar, Bangladesh and the Philippines. The authors pay special attention to the environmental and socio-economic challenges in the respective chapters and how they contribute to food insecurity. Each of the case studies identifies and analyzes which factors or drivers, environmental, economic, policy, technology, markets, have been the most powerful shapers of the food system and their future impact. The case studies identify interventions at regional, national and local level that contribute positively to food security, highlighting solutions that are effective and easy to implement for all levels of decision makers, from farmers to policy makers. Overall, the book provides insights in order to foster a greater understanding of the issues surrounding food security and support progress towards the goal of a sustainable food system for all.

Handbook of Food and Nutrition Security Bill Pritchard, Rodomiro Ortiz, Meera Shekar, 2016-03-31 The concept of food and nutrition security has evolved and risen to the top of the international policy agenda over the last decade Yet it is a complex and multi faceted issue requiring a broad and inter disciplinary perspective for full understanding This Handbook

represents the most comprehensive compilation of our current knowledge of food and nutrition security from a global perspective. It is organized to reflect the wide scope of the contents in its four sections corresponding to the accepted current definitional frameworks prevailing in the work of multilateral agencies and mainstream scholarship. The first section addresses the struggles and progression of ideas and debates about the subject in recent years. The other sections focus on three key themes: how food has been and should be made available including by improvements in agricultural productivity; the ways in which politico-economic and social arenas have shaped access to food; and the effects of food and nutrition systems in addressing human health, known as food utilisation. Overall, the volume synthesizes a vast field of information drawn from agriculture, soil science, climatology, economics, sociology, human and physical geography, the nutrition and health sciences, environmental science, and development studies.

Biofuels, Land Grabbing and Food Security in Africa Atakilt Beyene, Prosper B. Matondi, Kjell Havnevik, 2011-06-09. The issue of biofuels has already been much debated but the focus to date has largely been on Latin America and deforestation. This highly original work breaks fresh ground in looking at the African perspective. Most African governments see biofuels as having the potential to increase agricultural productivity and export incomes and thus strengthen their national economies, improving energy balances and rural employment. At the same time, climate change may be addressed through reduction of greenhouse gas emissions. There are, however, a number of uncertainties mounting that challenge this scenario. Using cutting-edge empirical case studies, this knowledge gap is addressed in a variety of chapters examining the effects of large-scale biofuel production on African agriculture. In particular, land grabbing and food security issues are scrutinised, both of which have become vital topics in regard to the environmental and developmental governance of African countries. A revealing book for anyone wishing to understand the startling impact of biofuels and land grabbing on Africa.

Climate Change and Food Security in South Asia Rattan Lal, Mannava VK Sivakumar, S.M.A. Faiz, A.H.M. Mustafizur Rahman, Khandakar R. Islam, 2010-10-17. This book addresses an important topic of food security in South Asia with specific reference to climate change. Of the 1 billion food-insecure people in the world, more than 30% are in South Asia. The problem of food insecurity may be exacerbated by the projected climate change, especially because of the water scarcity caused by rapid melting of the glaciers in the Himalayas and increase in variability in monsoonal rains and frequency of extreme events. Furthermore, large populations of Bangladesh and other coastal regions may be displaced by sea-level rise. Thus, this volume addresses recommended land use and soil water crop vegetation management practices which would enable land managers to adapt to climate disruption by enhancing soil ecosystem social resilience. In addition to biophysical factors, this book also addresses the issues related to human dimensions, including social, ethnical, and political considerations.
