Study Guide Evolution

Scientists estimate that the Earth is **4.6 billion years old**. This gives time for evolution to occur, organisms to adapt, and species to become extinct.

Fossils:

- The solid remains or imprints of once-living organisms.
- Fossils are commonly found in **sedimentary rock**.
- Fossils provide a historical sequence of life known as the **fossil record**.
- Fossils found deeper in the Earth's crust are usually older than those found in the upper crust.

Species:

- A group of organisms that can mate with one another to **produce fertile offspring**.
 - Example: A strawberry dart-poison frog would mate with a member of the same species – another strawberry dart-poison frog.

Speciation:

- The evolutionary process by which two populations of the same species become so different that they can no longer interbreed.
- The three steps of speciation are separation, adaptation, and division.

Morris, Per Lundberg, 2011-07-14 Pillars of Evolution provides a fresh and provocative perspective on adaptive evolution Readers new to the study of evolution will find a refreshing new insight that establishes evolutionary biology as a rigorous and predictive science whilst practicing biologists will discover a provocative book that challenges traditional approaches The book begins by leading readers through the mechanics of heredity reproduction movement survival and development With that framework in place it then explores the numerous ways that traits emerge from the interactions between genetics development and the environment The key message is that adaptive changes in traits and their underlying allelic frequencies evolve through the traits functions and their connection with fitness The complex mappings from genes to traits to fitness are characterized in the structure of evolution A single structure matrix describes why individuals vary in the values of adaptive traits their ability to perform the function of those traits and in the fitness they accrue Fitness depends on how organisms interact with and perceive their environment in time and space These relationships are made explicit in spatial temporal and

organizational scale that also sets the stage for the crucially important role that ecology always plays in evolution The ecological hallmarks of density and frequency dependent interactions allow the authors to explore new and exciting insights into evolution s dynamics The theories and principles are then brought together in a final synthesis on adaptation The book s unique approach unites genetic development and environmental influences into a single comprehensive treatment of the evolutionary process
