Advanced Topics In Dataflow Computing And Multithreading Practitioners:

Advanced Topics in Dataflow Computing and Multithreading Guang R. Gao,Lubomir Bic,Jean-Luc Gaudiot,1995-07-14 The book includes papers on massively parallel distributed memory and multithreaded architecture design synchronization and pipelined design and superpipelined data driven VLSI processors Other sections discuss stream data types the development of well structured software and parallelization of dataflow programs *Advanced Topics in Dataflow Computing and Multithreading* Lubomir Bic,Guang R. Gao,Jean-Luc Gaudiot,1995 **Sci-tech News** ,2003

Whitaker's Books in Print ,1998 **DataFlow Supercomputing Essentials** Veljko Milutinovic,Jakob Salom,Dragan Veljovic,Nenad Korolija,Dejan Markovic,Luka Petrovic,2017-10-30 This informative text reference highlights the potential of DataFlow computing in research requiring high speeds low power requirements and high precision while also benefiting from a reduction in the size of the equipment The cutting edge research and implementation case studies provided in this book will help the reader to develop their practical understanding of the advantages and unique features of this methodology This work serves as a companion title to DataFlow Supercomputing Essentials Algorithms Applications and Implementations which reviews the key algorithms in this area and provides useful examples Topics and features reviews the library of tools applications and source code available to support DataFlow programming discusses the enhancements to DataFlow computing yielded by small hardware changes different compilation techniques debugging and optimizing tools examines when a DataFlow architecture is best applied and for which types of calculation describes how converting applications to a DataFlow representation can result in an acceleration in performance while reducing the power consumption explains how to implement a DataFlow application on Maxeler hardware architecture with links to a video tutorial series available online This enlightening volume will be of great interest to all researchers investigating supercomputing in general and DataFlow computing in particular Advanced undergraduate and graduate students involved in courses on Data Mining Microprocessor Systems and VLSI Systems will also find the book to be a helpful reference **Data Flow Computing** John A. Sharp,1992 There is an increasing interest in data flow programming techniques This interest is motivated in part by the rapid advances in technology and the need for distributed processing techniques in part by a desire for faster throughput by applying parallel processing techniques and in part by search for a programming tool that is closer to the problem solving methods that people naturally adopts rather than current programming languages This book contains a selection of chapters by researchers on various aspects of the data flow approach in computing Topics covered include comparisons of various data flow machine designs data flow architectures intentional programming and operator nets and the relationship between data flow models and modern structured design techniques among others The book also includes a brief introduction to the data flow approach a bibliography and reviews of where research into data flow might be heading **Exploring the DataFlow Supercomputing Paradigm** Veljko Milutinovic,Milos Kotlar,2019-05-27 This useful text reference describes the

implementation of a varied selection of algorithms in the DataFlow paradigm highlighting the exciting potential of DataFlow computing for applications in such areas as image understanding biomedicine physics simulation and business The mapping of additional algorithms onto the DataFlow architecture is also covered in the following Springer titles from the same team DataFlow Supercomputing Essentials Research Development and Education DataFlow Supercomputing Essentials Algorithms Applications and Implementations and Guide to DataFlow Supercomputing Topics and Features introduces a novel method of graph partitioning for large graphs involving the construction of a skeleton graph describes a cloud supported web based integrated development environment that can develop and run programs without DataFlow hardware owned by the user showcases a new approach for the calculation of the extrema of functions in one dimension by implementing the Golden Section Search algorithm reviews algorithms for a DataFlow architecture that uses matrices and vectors as the underlying data structure presents an algorithm for spherical code design based on the variable repulsion force method discusses the implementation of a face recognition application using the DataFlow paradigm proposes a method for region of interest based image segmentation of mammogram images on high performance reconfigurable DataFlow computers surveys a diverse range of DataFlow applications in physics simulations and investigates a DataFlow implementation of a Bitcoin mining algorithm This unique volume will prove a valuable reference for researchers and programmers of DataFlow computing and supercomputing in general Graduate and advanced undergraduate students will also find that the book serves as an ideal supplementary text for courses on Data Mining Microprocessor Systems and VLSI Systems

DataFlow Supercomputing Essentials Veljko Milutinovic, Milos Kotlar, Marko Stojanovic, Igor Dundic, Nemanja Trifunovic, Zoran Babovic, 2017-12-11 This illuminating text reference reviews the fundamentals of programming for effective DataFlow computing The DataFlow paradigm enables considerable increases in speed and reductions in power consumption for supercomputing processes yet the programming model requires a distinctly different approach The algorithms and examples showcased in this book will help the reader to develop their understanding of the advantages and unique features of this methodology This work serves as a companion title to DataFlow Supercomputing Essentials Research Development and Education which analyzes the latest research in this area and the training resources available Topics and features presents an implementation of Neural Networks using the DataFlow paradigm as an alternative to the traditional ControlFlow approach discusses a solution to the three dimensional Poisson equation using the Fourier method and DataFlow technology examines how the performance of the Binary Search algorithm can be improved through implementation on a DataFlow architecture reviews the different way of thinking required to best configure the DataFlow engines for the processing of data in space flowing through the devices highlights how the DataFlow approach can efficiently support applications in big data analytics deep learning and the Internet of Things This indispensable volume will benefit all researchers interested in supercomputing in general and DataFlow computing in particular Advanced undergraduate and graduate students involved

in courses on Data Mining Microprocessor Systems and VLSI Systems will also find the book to be an invaluable resource
