Advanced Zeolite Science And Applications Volume 85 Studies In Surface Science And Catalysis:

Advanced Zeolite Science and Applications Michael Stöcker, H.G. Karge, J.C. Jansen, J. Weitkamp, 1994-07-19 Zeolites and related microporous materials are used in oil processing and in the fine and petrochemical industries on a large scale New applications of zeolites contribute to environmentally friendly processes and refined zeolites such as catalytic zeolite membranes and zeolites containing exhaust pipe reactors are being introduced Recent diversity in zeolite research has been fueled by the increase in number of microporous materials and the combination with interfacing science areas The possibility to accommodate ions large molecules or nanostructures in the crystalline matrix has been explored and the performance of electronic acoustic and photonic modified response of the materials has been tested This volume provides up to date information on new zeolite and related materials and composites their applications testing of new processes and techniques and promising laboratory results as well A vast amount of work from a fundamental aspect is incorporated In particular the combination of science and application offers useful information for readers interested in molecular sieves *Handbook of Zeolite Science and Technology* Scott M. Auerbach, Kathleen A. Carrado, Prabir K. Dutta, 2003-07-31 The Handbook of Zeolite Science and Technology offers effective analyses of salient cases selected expressly for their relevance to current and prospective research Presenting the principal theoretical and experimental underpinnings of zeolites this international effort is at once complete and forward looking combining fundamental *Zeolites and Ordered Mesoporous Materials: Progress and Prospects* Jiri Cejka, 2005-08-09 Zeolites are the most frequently used industrial catalysts Their applications range from oil refining petrochemistry and the synthesis of special chemicals to environmental catalysis Rapid progress in basic research and the development of new processes has resulted in the first Federation of European Zeolite Associations FEZA School on Zeolites Zeolites and Ordered Mesoporous Materials Progress and Prospects reflects the programme of the first School on Zeolites held in Prague on August 20 21 2005 Readers gain insight into the synthesis of the ever expanding spectrum of zeolites zeotypes and ordered mesoporous materials including the use of zeolites and mesoporous materials as catalysts in organic conversions These range from the fascinating ship in bottle systems via cascade reactions to bulk applications in oil refining and petrochemistry Contributions from world experts enhance the book with select chapters on trends in the molecular sieves field zeolite structures ion exchange properties of zeolites advanced applications with unique technologies and opportunities and a chapter on natural zeolites Contains contributions from world experts in the field Includes an account of the frontier topic of high throughput techniques Reviews the application of quantum chemical methods to zeolite science to show the necessity of combining experimental and theoretical approaches **Catalysis and Zeolites** Jens Weitkamp, Lothar Puppe, 1999-06 Zeolites and zeolite like microporous materials have been playing an ever increasing role in heterogeneous catalysis for more than three decades An impressive number of large scale industrial processes in petroleum refining petrochemistry and the manufacture of organic chemicals are nowadays carried out using zeolite catalysts and the

future of zeolites in industrial catalysis continues to be bright Authored by an international team of renowned scientists the seven chapters of this book present a comprehensive overview of the application of zeolites in industrial catalysis while also providing a true scientific understanding of how zeolites are synthesized modified and characterized and putting special emphasis on shape selective catalysis which is a unique feature of zeolites

Diffuse X-Ray Scattering and Models of Disorder Thomas Richard Welberry, 2004-09-09 Diffuse X ray scattering is a rich virtually untapped source of local structural information over and above that obtained by conventional crystal structure determination crystallography The main aim in the book is to show how computer simulation of a model crystal provides a general method by which diffuse scattering of all kinds and from all types of materials can be interpreted and analysed Part I of the book gives a description of the experimental methods used to obtain diffuse scattering data Part II describes a number of simple stochastic models of disorder which allows various concepts to be established and enables simple examples to be generated to illustrate key principles Part III describes example studies of a wide variety of real materials These examples not only document the development of computer simulation methods for investigating and analysing disorder problems but also provide a resource for helping future researchers recognise the kinds of effects which can occur and for pointing the way to tackling new problems which are encountered

Fluid Catalytic Cracking VII: , 2011-09-22 Since 1987 the Petroleum Division of the American Chemical Society ACS has sponsored at 3 year intervals an international symposium on fluid cracking catalysts FCC technology This volume collects the recent progress of this technology as reported in the papers presented during the 232th National Meeting of the ACS in San Francisco September 10 14 2006 Sixty six years after the introduction of the fluid cracking catalyst process it remains the main process of gasoline generation for the estimated 237 millions cars on US roads Catalysts testing and evaluation still remains a subject of interest debate and controversy Lambda sweep testing testing of SO_x NO_x and combustion promoters have been discussed in details together with catalyst evaluation for atmospheric residues and metal contaminated oils cracking Of particular interest has been the introduction of novel concept in process design aimed at improving cracked product selectivity such as two stage risers for better gasoline and olefins production and downer technology for high severity processes The importance of solid state nuclear magnetic resonance NMR in the study of crude oils catalysts and reaction products are illustrated by several examples Two contributions describe the use of predictive methods to understand FCC aging and deactivation and personal overviews of the development of SO_x and combustion promoters technology are presented Presents findings from the tri annual international symposium on fluid cracking catalysts FCC technology sponsored by the Petroleum Division of the American Chemical Society ACS Two contributions describe the use of predictive methods to understand FCC aging and deactivation Personal overviews by the authors of the development of SO_x and combustion promoters technology

Catalysis by Microporous Materials H.K. Beyer, J.B. Nagy, H.G. Karge, I. Kiricsi, 1995-05-19 ZEOCAT 95 is the eleventh in the series of symposia devoted to special

fields of zeolite chemistry Six plenary lectures forty oral and forty two poster presentations were included in the program The accepted papers cover every aspect of catalysis on microporous materials A significant number of the contributions describe the synthesis modification instrumental and chemical characterisation of zeolites and other micro and mesoporous materials Catalytic reactions involve hydrocarbon cracking nucleophilic aromatic substitution methanol to hydrocarbon conversion hydration of acetylene various alkylation reactions redox transformations Claisen rearrangement etc *Advances in Photochemistry* Douglas C. Neckers, Günther von Büнау, William S. Jenks, 2003-03-31 More than a simple survey of the current literature *Advances in Photochemistry* offers critical evaluations written by internationally recognized experts These pioneering scientists offer unique and varied points of view of the existing data Their articles are challenging as well as provocative and are intended to stimulate discussion promote further research and encourage new developments in the field

Proceedings of the Third International Symposium on Quantum Confinement, 1996 *Molecular Sieves* Rosemarie Szostak, 1998 The porous structure of molecular sieves combined with their chemical composition makes them uniquely suitable for use as catalysts or catalytic supports As such the materials are used in a wide range of chemical reactions and as components of formulated products The shape selectivity of the materials further enhances their chemical usefulness and exploitation of their unique absorption properties holds the key to improving their catalytic properties To that end great efforts are being made to find new of different molecular sieves with altered or tailored structures or chemical composition The synthesis and characterisation of molecular sieve materials is a considerable challenge testing both the chemist's understanding and practical skills In a thorough overhaul of the very successful first edition of this book the author guides the reader in the basics of sieve structure synthesis and characterisation and points the way to the development of new or improved sieve materials By covering both the principles and practical aspects of sieve synthesis and characterisation professional chemists particularly those involved in industrial research and development will find this book an essential guide to the current state of the art and a useful starting point in their own research Academic chemists including postgraduate students will find this book an invaluable guide to this exciting and important area of chemistry
