Advances In Quantitative Asset Management Studies In Computational Finance:

Advances in Quantitative Asset Management Christian Dunis, 2000-04-30 Advances in Quantitative Asset Management contains selected articles which for the most part were presented at the Forecasting Financial Markets Conference Forecasting Financial Markets is an international conference on quantitative finance which is held in London in May every year Since its inception in 1994 the conference has grown in scope and stature to become a key international meeting point for those interested in quantitative finance with the participation of prestigious academic and research institutions from all over the world including major central banks and quantitative fund managers The editor has chosen to concentrate on advances in quantitative asset management and accordingly the papers in this book are organized around two major themes advances in asset allocation and portfolio management and modelling risk return and correlation

Quantitative Equity Portfolio Management Edward E. Qian, Ronald H. Hua, Eric H. Sorensen, 2007-05-11 Quantitative equity portfolio management combines theories and advanced techniques from several disciplines including financial economics accounting mathematics and operational research While many texts are devoted to these disciplines few deal with quantitative equity investing in a systematic and mathematical framework that is suitable for Estimation in Conditionally Heteroscedastic Time Series Models Daniel Straumann, 2006-01-27 In his seminal 1982 paper Robert F Engle described a time series model with a time varying volatility Engle showed that this model which he called ARCH autoregressive conditionally heteroscedastic is well suited for the description of economic and financial price Nowadays ARCH has been replaced by more general and more sophisticated models such as GARCH generalized autoregressive heteroscedastic This monograph concentrates on mathematical statistical problems associated with fitting conditionally heteroscedastic time series models to data This includes the classical statistical issues of consistency and limiting distribution of estimators Particular attention is addressed to quasi maximum likelihood estimation and misspecified models along to phenomena due to heavy tailed innovations The used methods are based on techniques applied to the analysis of stochastic recurrence equations Proofs and arguments are given wherever possible in full mathematical rigour Moreover the theory is illustrated by examples and simulation studies

Portfolios of Real Options Rainer Brosch, 2008-03-29 Valuing portfolios of options embedded in investment decisions is arguably one of the most important and challenging problems in real options and corporate finance in general Although the problem is common and vitally important in the value creation process of almost any corporation it has not yet been satisfactorily addressed It is key for any corporation facing strategic resource allocation decisions be it a pharmaceutical firm valuing and managing its pipeline of drugs a telecom company having to select a set of technological alternatives a venture capital or private equity firm investing in a portfolio of ventures or any company allocating resources Portfolios of real options typically interact such that the value of the whole differs from the sum of the separate parts Thus one must address and value the particular configuration of options embedded in a specific situation taking into account the configuration of other options already present in the portfolio which in turn depends on the correlation structure among the various underlying assets and the strategic dependencies among the options themselves e.g mutual exclusivity strategic additivity compoundness complementarity etc In that sense optimal decisions also depend on past option exercise decisions by management and organizational capabilities put in place in the past
