Design Guide for Concrete-filled Double Skin Steel Tubular Structures Lin-Hai Han, Dennis Lam, David Nethercot, 2018-10-12 This is the first design guide on concrete filled double skin steel tubular CFST structures. It addresses in particular CFST structures with plain concrete sandwiched between circular hollow sections and provides the relevant calculation methods and construction provisions for CFST structures. These inherit the advantages of conventional concrete filled steel tubular CFST structures including high strength, good ductility and durability, high fire resistance and favourable constructability. Moreover, because of their unique sectional configuration, CFST structures have been proved to possess lighter weight, higher bending stiffness and better cyclic performance than conventional CFST. Consequently, CFST can offer reduced concrete consumption and construction costs. This design guide is for engineers designing electrical grid infrastructures, wind power towers, bridge piers and other structures requiring light self weight, high bending stiffness and high bearing capacity.

Dynamics of Civil Structures, Volume 2 Shamim Pakzad, 2025-08-07 Dynamics of Civil Structures Volume 2 Proceedings of the 38th IMAC A Conference and Exposition on Structural Dynamics 2020, the second volume of eight from the Conference brings together contributions to this important area of research and engineering. The collection presents early findings and case studies on fundamental and applied aspects of the Dynamics of Civil Structures, including papers on Structural Vibration, Humans Structures, Innovative Measurement for Structural Applications, Smart Structures and Automation, Modal Identification of Structural Systems, Bridges and Novel Vibration Analysis, Sensors and Control.

Advances and Trends in Engineering Sciences and Technologies III Mohamad Ali, Peter Platko, 2019-03-25 These are the proceedings of the 3rd International Conference on Engineering Sciences and Technologies ESaT 2018, held from 12th to 14th September 2018 in the High Tatras Mountains, Tatranská Matliarska, Slovak Republic. ESaT 2018 was organized under the auspices of the Faculty of Civil Engineering, Technical University of Košice, Slovak Republic, in collaboration with Peter the Great St. Petersburg Polytechnic University, Russia, after the successful organization with excellent feedback of the previous international conferences ESaT 2015 and ESaT 2016. The proceedings cover various topics and disciplines in civil engineering sciences such as Buildings and Architectural Engineering, Bearing Structures, Material and Environmental Engineering, Construction Technology and Management, Building Physics and Facilities, Geodesy, Surveying and Mapping, Geotechnics and Traffic Engineering. The proceedings report on new and original progress and trends in various fields of engineering sciences that will be of interest to a wide range of academics and professionals from university and industry. 116 papers originating from more than 10 countries have been accepted for publication in the conference proceedings. Each accepted paper was reviewed by two reviewers selected according to the scientific area and orientation of the paper, which guarantees topicality, quality and an advanced level of the presented results.
