Experimental Evidence

The existing experimental literature deals with controlling confounding. However, the experimental design process has other considerations that should be taken up here, although the design considerations should be kept in mind. Differences between field quasi-experiments and laboratory experiments are discussed in terms of their methodological and statistical differences.

There are many reasons why field experiments are more difficult to conduct than laboratory experiments. One reason is that field experiments are more likely to be subject to confounding. Another reason is that field experiments are more likely to be subject to external validity. A third reason is that field experiments are more likely to be subject to internal validity. A fourth reason is that field experiments are more likely to be subject to statistical validity. A fifth reason is that field experiments are more likely to be subject to methodological validity. A sixth reason is that field experiments are more likely to be subject to statistical validity. A seventh reason is that field experiments are more likely to be subject to methodological validity. A eighth reason is that field experiments are more likely to be subject to statistical validity. A ninth reason is that field experiments are more likely to be subject to methodological validity. A tenth reason is that field experiments are more likely to be subject to statistical validity.
