Theory of Mind in Relation to Other Cognitive Abilities, volume II Ann Dowker,Douglas Frye,2025-08-11 This Research Topic is the second volume of the Research Topic Theory of Mind in Relation to Other Cognitive Abilities Please see the first volume here Theory of mind and its development have been subjects of much research over the last 40 years It is

generally thought to be very important in cognitive and social development. However, there is still much debate as to how it should be defined and even as to whether it is a single entity. In particular, there is controversy as to the extent to which it should be seen as a specific cognitive module or rather as dependent on or mutually developing with other cognitive abilities and characteristics such as language, metacognition, executive function, and cognitive and perceptual styles that emphasize gist versus detail, strong versus weak central coherence. It is also possible that the theory of mind itself has several different components which may be related to different degrees of different cognitive abilities and characteristics. Any relationships between the theory of mind and other cognitive characteristics may also vary with age and may differ between typically developing children and those with autism and other atypical conditions. Gaining a greater understanding of these issues is important to increasing our understanding of theory of mind itself, the nature of cognitive development, the similarities and differences between typically and atypically developing children, and whether it may be possible to devise interventions to improve theory of mind either directly or by means of improving other abilities. The goal of the current Research Topic is to bring together articles on various aspects of the theory of mind and any concurrent and longitudinal relationships to other cognitive abilities and characteristics. These articles may involve studies of children, adults, or both. It is expected that they will primarily include empirical research papers, but theoretical articles, literature reviews, and meta-analyses are also welcome.
