Summarized content on the first page of the topics that are covered in the chapter. More than 10 real-world mechanical engineering problems used as tutorials. Additional information throughout the book in the form of notes, tips, Self-Evaluation Tests, and Review Questions at the end of each chapter to help the users assess their knowledge. **Table of Contents:** Chapter 1: Introduction to FEA; Chapter 2: Introduction to ANSYS Workbench; Chapter 3: Part Modeling I; Chapter 4: Part Modeling II; Chapter 5: Part Modeling III; Chapter 6: Defining Material Properties; Chapter 7: Generating Mesh I; Chapter 8: Generating Mesh II; Chapter 9: Static Structural Analysis; Chapter 10: Modal Analysis; Chapter 11: Thermal Analysis; Index.

**ANSYS Introduction to ANSYS** Swanson Analysis Systems, 1993      **Numerical and experimental investigations of distribution of gaseous emissions with the air flow in the indoor environment** Umer Afzal, 2017. There are many sources of emissions produced by burning fuel for power or heat through chemical reactions and from leaks from industrial processes or equipment. There is always a possibility of a potential hazard when these gases enter into the indoor environment with the air flow. The determination of the concentration profiles are necessary to evaluate the potential hazard posed by the gas spread. The main objectives of this work are to develop an appropriate measurement methodology and a 3D CFD transient multicomponent simulation model for the determination of spatial and temporal distribution of gaseous emissions with the air flow in the indoor environment. This work is also aimed at comparing the numerical simulation results of different CFD programs for a 2D base case model of indoor air flow with and without emission source under laminar and turbulent flow conditions for the purpose of developing a better basic understanding of the physical phenomena and for the selection of the suitable and appropriate CFD program for the further development of the simulation model. One of the goals is also to apply the developed simulation model to the loss prevention and risk mitigation in the indoor environment and to study the influence of different parameters on the concentration distribution of gaseous pollutants in the presence of air flow in the indoor environment to minimize the expensive and time-consuming experimentation efforts.
