Antenna Arrays And Automotive Applications:

Antenna Arrays and Automotive Applications Victor Rabinovich, Nikolai Alexandrov, 2012-08-09 This book throws a lifeline to designers wading through mounds of antenna array patents looking for the most suitable systems for their projects. Drastically reducing the research time required to locate solutions to the latest challenges in automotive communications, it sorts and systematizes material on cutting edge antenna arrays that feature multi element communication systems with enormous potential for the automotive industry. These new systems promise to make driving safer and more efficient opening up myriad applications including vehicle to vehicle traffic that prevents collisions, automatic toll collection, vehicle location and fine tuning for cruise control systems. This book's exhaustive coverage begins with currently deployed systems, frequency ranges and key parameters. It proceeds to examine system geometry, analog and digital beam steering technology including smart beams formed in noisy environments, maximizing signal to noise ratios, miniaturization and base station technology that facilitates in-car connectivity while on the move. An essential guide for technicians working in a fast developing field, this new volume will be warmly welcomed as a powerful aid in their endeavors.

Antenna Arrays and Automotive Applications Springer, 2012-08-31 *Large Aperture Array Radar Systems for Automotive Applications* Fabian Schwartau, 2021-10-18 The radar, besides camera and Lidar systems, is a core sensor to enable autonomous driving. The relatively limited angular resolution is the major drawback of the radar. This thesis shows the development of a conceptual future radar system for automotive applications. The focus is on providing a large antenna aperture to achieve the required high angular resolution. Two genetic algorithms are developed to optimize the antenna array for a good side lobe level while providing high angular resolution. Two demonstrators are built to implement certain aspects of the proposed radar system and prove the general concept viable. The first demonstrator features a large aperture with a limited side lobe level and is using a modular approach. The modules are synchronized with a radio over fiber system. The second demonstrator uses the previously proposed antenna array which is implemented with a synthetic aperture radar approach. The system's capabilities in a real scenario are demonstrated and the reconstruction of a high resolution three dimensional image from the captured data is shown. Das Radar stellt neben Kamera und Lidar Systemen einen zentralen Sensor für das autonome Fahren dar. Dabei ist die relativ geringe Winkelauflösung der primäre Nachteil des Radars. Diese Arbeit zeigt die Entwicklung eines konzeptionellen zukünftigen Radarsystems für automobiler Anwendungen. Der Schwerpunkt liegt auf der Umsetzung einer großen Antennenapertur, um die erforderliche hohe Winkelauflösung zu erreichen. Zwei evolutionäre Algorithmen werden vorgestellt, um das Antennen-Array auf einen guten Nebenkeulen-Pegel zu optimieren und gleichzeitig eine hohe Winkelauflösung zu erreichen. Zwei Demonstratoren werden gebaut, um bestimmte Aspekte des vorgeschlagenen Radarsystems zu implementieren und die Durchführbarkeit des allgemeinen Konzepts zu zeigen. Der erste Demonstrator weist eine große Apertur mit einem begrenzten Nebenkeulen-Niveau auf und verwendet einen modularen Ansatz. Die Module sind mit einem Radio over Fiber System

synchronisiert Der zweite Demonstrator verwendet die zuvor entworfene Antennenanordnung die mit einem Radar mit synthetischer Apertur realisiert wird Die Fähigkeiten des Systems werden in einem realen Szenario demonstriert und die Rekonstruktion eines hochauflösenden dreidimensionalen Bildes aus den erfassten Daten gezeigt
