Khalid, Neutrosophy means the study of ideas and notions that are not true nor false but in between i e neutral indeterminate unclear vague ambiguous incomplete contradictory etc Each field has a neutrosophic part i e that part that has indeterminacy Thus there were born the neutrosophic logic neutrosophic set neutrosophic probability neutrosophic statistics neutrosophic measure neutrosophic precalculus neutrosophic calculus etc There exist many types of indeterminacies that is why neutrosophy can be developed in many different ways **Exterior Ballistics with Applications** George Klimi,2008-07-30 Exterior Ballistics with Applications Skydiving Parachute Fall Flying Fragments presents a modern approach to introduce the basics of exterior

ballistics and its methods from the simple ideal model of projectile motion to the automatic solution of the differential equations of projectile flight using PC programs The book uses different approaches to solve the differential equations of projectile motion among them the Siacci method and the numerical methods The results obtained through the integration of differential equations of projectile flight are mostly analytical formulas that describe the projectile trajectory and make the exterior ballistics a comprehensible science The Differential Equations of Projectile Flight are also integrated numerically using some original PC programs that can be easily modified to be used in similar scenarios or other new ones and give the reader the possibility to solve a great variety of Exterior Ballistics problem Exterior Ballistics with Applications can be considered as an interdisciplinary applied mathematics and physics manuscript for the vast mathematics and physics models and techniques employed It is a great source for applications in physics calculus differential equations numerical methods and PC programming as well The book is illustrated with about 140 solved examples related to different artillery and infantry firearms that demonstrate the use of formulas and the solution methods of ballistics to find the elements of projectile trajectories Exterior Ballistics with Applications includes as well two interesting topics that can be considered as applications of exterior ballistics 1 Skydiving and parachute falling related with the trajectory of a parachutist launched from a horizontally flying airplane with un deployed parachute in different meteorological conditions and in presence of air resistance and wind 2 The ballistics of projectile fragments that is an important element of Terminal Ballistics necessary to study the effectiveness of fragmentation ammunitions on the personnel and objects and other problems related with the construction of fragmentation ammunitions or with Forensic Sciences Exterior Ballistics with Applications is comprehensive and serves as reference material to provide answers to problems encountered in the practice of motion of unguided projectiles skydiving and flying fragments of antipersonnel ammunitions
