Basic Topology:

Basic Topology 1 Avishek Adhikari, Mahima Ranjan Adhikari, 2022-07-04 This first of the three volume book is targeted as a basic course in topology for undergraduate and graduate students of mathematics It studies metric spaces and general topology It starts with the concept of the metric which is an abstraction of distance in the Euclidean space The special structure of a metric space induces a topology that leads to many applications of topology in modern analysis and modern algebra as shown in this volume This volume also studies topological properties such as compactness and connectedness Considering the importance of compactness in mathematics this study covers the Stone Cech compactification and Alexandroff one point compactification This volume also includes the Urysohn lemma Urysohn metrization theorem Tietz extension theorem and Gelfand Kolmogoroff theorem The content of this volume is spread into eight chapters of which the last chapter conveys the history of metric spaces and the history of the emergence of the concepts leading to the development of topology as a subject with their motivations with an emphasis on general topology It includes more material than is comfortably covered by beginner students in a one semester course Students of advanced courses will also find the book useful This book will promote the scope power and active learning of the subject all the while covering a wide range of theories and applications in a balanced unified way

Basic Topology M.A. Armstrong, 2013-04-09 In this broad introduction to topology the author searches for topological invariants of spaces together with techniques for calculating them Students with knowledge of real analysis elementary group theory and linear algebra will quickly become familiar with a wide variety of techniques and applications involving point set geometric and algebraic topology Over 139 illustrations and more than 350 problems of various difficulties will help students gain a rounded understanding of the subject

General Topology Tom Richmond, 2020-07-06 The first half of the book provides an introduction to general topology with ample space given to exercises and carefully selected applications The second half of the text includes topics in asymmetric topology a field motivated by applications in computer science Recurring themes include the interactions of topology with order theory and mathematics designed to model loss of resolution situations

Basic Topology 3 Mahima Ranjan Adhikari, 2023-03-15 This third of the three volume book is targeted as a basic course in algebraic topology and topology for fiber bundles for undergraduate and graduate students of mathematics It focuses on many variants of topology and its applications in modern analysis geometry and algebra Topics covered in this volume include homotopy theory homology and cohomology theories homotopy theory of fiber bundles Euler characteristic and the Betti number It also includes certain classic problems such as the Jordan curve theorem along with the discussions on higher homotopy groups and establishes links between homotopy and homology theories axiomatic approach to homology and cohomology as inaugurated by Eilenberg and Steenrod It includes more material than is comfortably covered by beginner students in a one semester course Students of advanced courses will also find the book useful This book will promote the scope power and active learning of the subject all the while

covering a wide range of theory and applications in a balanced unified way **A Basic Course in Algebraic Topology** William S. Massey, 2019-06-28 This textbook is intended for a course in algebraic topology at the beginning graduate level The main topics covered are the classification of compact 2 manifolds the fundamental group covering spaces singular homology theory and singular cohomology theory These topics are developed systematically avoiding all unnecessary definitions terminology and technical machinery The text consists of material from the first five chapters of the author's earlier book Algebraic Topology an Introduction GTM 56 together with almost all of his book Singular Homology Theory GTM 70 The material from the two earlier books has been substantially revised corrected and brought up to date **General Topology** Tom Richmond, 2020-07-06 The first half of the book provides an introduction to general topology with ample space given to exercises and carefully selected applications The second half of the text includes topics in asymmetric topology a field motivated by applications in computer science Recurring themes include the interactions of topology with order theory and mathematics designed to model loss of resolution situations Basic Topology Dan Edwin Christie, 1976

Positive Topology Giovanni Sambin, 2025-10-30 Aimed at researchers in mathematics philosophy and logic this book provides the first organic exposition of dynamic constructivism and the mathematics ensuing in practice including discussion of the technical development of the field and outlining the philosophical and methodological motivations underlying the evolution of the discipline In dynamic constructivism mathematics is seen as the result of a dynamic process of interaction between the construction of mathematical entities by abstraction and by idealization and their selection according to their efficiency in applications to reality and in the organisation of mathematics itself The crucial benefit of this vision is its independence from dogmas and external authorities A practical consequence is full respect for the diverse areas of mathematics mainly computation spatial intuition deduction and abstract axiomatic method without reducing one to another As a second consequence a dynamic interaction between different epistemological levels is always active and present in the development of mathematics in practice the study of its foundations and its formalisation in a computer language *The TCP/IP Guide* Charles M.
