

How Populations Grow

Describing Populations

Researchers study five important characteristics of a population

- Geographic range is the area in which a population lives.
- Population density is the number of individuals per unit area.
- Population distribution is how individuals are spaced out in their range.
- Growth rate determines whether a population grows, shrinks, or stays the same size
- Age structure is the number of males and females of each age in a population.

Population Growth

Populations can grow, shrink, or stay the same size.

Factors that increase population size include births and immigration , which is the movement of individuals into an area.

Factors that decrease population size include deaths and emigration , which is the movement of individuals out of an area.

Exponential versus logistic population growth

Exponential Growth

When conditions are ideal, the larger a population gets, the faster it grows. When a population's numbers grow larger with each generation, exponential growth is occurring. Ideal conditions include unlimited resources and absence of predation and disease.
