Strategic System Assurance and Business Analytics P.

K. Kapur, Ompal Singh, Sunil Kumar Khatri, Ajit Kumar Verma, 2020-06-19 This book systematically examines and quantifies industrial problems by assessing the complexity and safety of large systems. It includes chapters on system performance management, software reliability assessment, testing, quality management, analysis using soft computing techniques, management analytics, and business analytics with a clear focus on exploring real world business issues. Through contributions from researchers working in the area of performance management and business analytics, it explores the development of new methods and approaches to improve business by gaining knowledge from bulk data. With system performance analytics, companies are now able to drive performance and provide actionable insights for each level and for every role using key indicators, generate mobile enabled scorecards, time series based analysis using charts and dashboards. In the current dynamic environment, a viable tool known as multi criteria decision analysis (MCDA) is increasingly being adopted to deal with complex business decisions. MCDA is an important decision support tool for analyzing goals and providing optimal solutions and alternatives. It comprises several distinct techniques which are implemented by specialized decision making packages. This book addresses a number of important MCDA methods such as DEMATEL, TOPSIS, AHP, MAUT, and Intuitionistic Fuzzy MCDM which make it possible to derive maximum utility in the area of analytics. As such, it is a valuable resource for researchers and academicians as well as practitioners and business experts. *IUTAM Symposium on Emerging Trends in Rotor Dynamics*. K. Gupta, 2011-01-06 Rotor dynamics is an important branch of dynamics that deals with the behavior of rotating machines ranging from very large systems like power plant rotors, for example a turbogenerator, to very small systems like a tiny dentist's drill, with a variety of rotors such as pumps, compressors, steam gas turbines, motors, turbopumps, etc. as used, for example, in process industry, falling in between. The speeds of these rotors vary in a large range from a few hundred RPM to more than a hundred thousand RPM. Complex systems of rotating shafts, depending upon their specific requirements, are supported on different types of bearings. There are rolling element bearings, various kinds of fluid film bearings, foil and gas bearings, magnetic bearings, to name a few. The present day rotors are much lighter, handle a large amount of energy, and fluid mass, operate at much higher speeds, and therefore are most susceptible to vibration and instability problems. This has given rise to several interesting physical phenomena, some of which are fairly well understood today, while some are still the subject of continued investigation. Research in rotor dynamics started more than one hundred years ago. The progress of the research in the early years was slow. However, with the availability of larger computing power and versatile measurement technologies, research in all aspects of rotor dynamics has accelerated over the past decades. The demand from industry for light weight, high performance, and reliable rotor bearing systems is the driving force for research and new developments in the field of rotor dynamics. The symposium proceedings contain papers on various important aspects of rotor dynamics such as modeling, analytical, computational, and experimental methods, developments in bearings, dampers, seals, including magnetic bearings, rub impact, and foundation effects, turbomachine blades, active and passive
