Antarctic Palaeoenvironments and Earth-Surface Processes M.J. Hambrey, P.F. Barker, P.J. Barrett, V. Bowman, B. Davies, J.L. Smellie, M. Tranter, 2013-12-05 The volume highlights developments in our understanding of the palaeogeographical palaeobiological palaeoclimatic and cryospheric evolution of Antarctica It focuses on the sedimentary

record from the Devonian to the Quaternary Period It features tectonic evolution and stratigraphy as well as processes taking place adjacent to beneath and beyond the ice sheet margin including the continental shelf The contributions in this volume include several invited review papers as well as original research papers arising from the International Symposium on Antarctic Earth Sciences in Edinburgh in July 2011 These papers demonstrate a remarkable diversity of Earth science interests in the Antarctic Following international trends there is particular emphasis on the Cenozoic Era reflecting the increasing emphasis on the documentation and understanding of the past record of ice sheet fluctuations Furthermore Antarctic Earth history is providing us with important information about potential future trends as the impact of global warming is increasingly felt on the continent and its ocean

Earth and Life Processes Discovered from Subseafloor Environments, 2014-12-03 The Integrated Ocean Drilling Program IODP 2000 2013 has provided crucial records of past and present processes and interactions within and between the biosphere cryosphere atmosphere hydrosphere and geosphere Research in IODP encompasses a wide range of fundamental and applied issues that affect society such as global climate change biodiversity the origin of life natural hazards involving the study of earthquakes processes and the internal structure and dynamics of our planet This compilation of major findings from the 2003 2013 14 phase of IODP focusing on scientific results rather than description of data acquisition and early inferences provides invaluable information Anyone wondering what scientific drilling can achieve will gain quick understanding of the range of questions that are uniquely addressed with this methodology and the ways these data dovetail with other regional information The excitement of breakthrough findings that occasionally accompanies a drilling project will be evident IODP obtained unique records from the global ocean basins during the 2003 2013 program phase This book highlights findings in three theme areas Subseafloor life and the marine biosphere Earth's changing environments and Dynamics of the solid Earth Each core or borehole log provides a window revealing insights that no other data achieve Presents syntheses of key results from the Integrated Ocean Drilling Program Encompasses a wide range of issues that affect society Describes the Integrated Ocean Drilling Program and its expeditions

Palaeoproterozoic Supercontinents and Global Evolution Steven Michael Reddy, 2009 The Palaeoproterozoic era 2500 1600 Ma is a critical period of Earth history with dynamic evolution from the deep planetary interior to its surface environment Several lines of geological evidence suggest the existence of at least one pre Rodinia supercontinent named Nuna or Columbia which formed near the end of Palaeoproterozoic time Prior to this assembly there may have been an older supercontinent Kenorland or perhaps only independently drifting supercratons The tectonic records of amalgamation and dispersal of these ancient landmasses provide a framework that links processes of the deep Earth with those of its fluid envelope The sixteen papers in this volume present reviews and new analytical data that span the geological record of Palaeoproterozoic Earth The volume is useful as a reference book for students and professional geoscientists interested in this important period of global evolution

The Geochemistry and Geophysics of the Antarctic Mantle A.P. Martin, W. van

der Wal, 2023-02-14 This Memoir is the first dedicated to the Antarctic mantle. It is a cross-disciplinary reference work combining geochemistry and geophysics to characterize Antarctic mantle properties. Through observations and modelling, the mantle structures, compositions, and dynamics are characterized at regional and continental scales by subject experts. The Memoir reviews all known occurrences of sub-continental mantle xenoliths in igneous rocks. These studies are presented by region as southern or northern Victoria Land, Marie Byrd Land, the Antarctic Peninsula, East Antarctica, and the sub-Antarctic Islands. Sub-oceanic mantle in tectonically emplaced and abyssal settings is also considered where known. This is complemented by a continental scale mantle xenolith overview, mantle characteristics from igneous rocks, and a quantitative mantle fabric study. State-of-the-art continental scale geophysical overviews of the Antarctic mantle are presented by discipline as seismology, gravity, and magnetism; magnetotellurics, rheology, glacial isostatic adjustment, mantle convection, and palaeotopography. This Memoir will be the reference for all researchers interested in the Antarctic mantle and its role in dynamics that shape the Antarctic surface and ice sheets.
