Anthropological Research The Structure Of Inquiry:

Anthropological Research Pertti J. Peltto, Gretel H. Peltto, 1978-02-16 A comprehensive text on research methods in social and cultural anthropology covering tools counting and sampling fieldwork and research design Originally published by Harper Row 1970 **Anthropological Research** Pertti J. Peltto, Gretel H. Peltto, 1981 **Anthropological Research** Pertti J. Peltto, 1971 **Researching Interpersonal Relationships** Jimmie Manning, Adrienne Kunkel, 2013-03-22 This accessible book explores and demonstrates methodological tools used to guide qualitative relationships research especially studies of interpersonal communication Researching Interpersonal Relationships introduces both classic and cutting edge methodological approaches for qualitative inquiry and analysis including opening chapters with accessible overviews of interpretive theory and research design Additional chapters feature a detailed overview of a specific method and analytical tool and are illustrated by original research studies from leading scholars in the field each in a different interpersonal communication context Post study interviews with the researchers are also provided to allow new and experienced researchers a better understanding of how qualitative research approaches can expand and solidify understandings of personal relationships This groundbreaking book is the first of its kind written especially for relationships researchers on qualitative research and it makes a welcome addition to advanced undergraduate and graduate student classrooms as well as any serious qualitative relationships researcher's bookshelf **Using Methods in the Field** Victor C. de Munck, Elisa J. Sobo, 1998-08-24 Methods textbooks generally offer prescriptive advice on how to perform certain techniques how to develop specific strategies how to analyze your results But as all experienced ethnographers know this fine sounding advice rarely provides ample guidance in dealing with real people in real field settings That is where this casebook differs Selecting many key methods regularly used by anthropologists participant observation consensus analysis simple surveys scaling freelist and triads networks decision modeling the editors commissioned scholars who have completed studies using these techniques to describe them in the context of real field work Using cases from health community politics family relations and child development among others in settings as diverse as an Arkansas college campus a Mexican barrio a Thai village and a Scottish business the student is given a clear understanding of the diversity of methods used by anthropologists and the complexities surrounding their use *The SAGE Handbook of Case-Based Methods* David Byrne, Charles C. Ragin, 2009-07-01 This handbook provides a clear examination of case oriented research It defines case based social research as a subfield of methodology *Handbook of Methods in Cultural Anthropology* H. Russell Bernard, Clarence C. Gravlee, 2014-07-08 The Handbook of Methods in Cultural Anthropology now in its second edition maintains a strong benchmark for understanding the scope of contemporary anthropological field methods Avoiding divisive debates over science and humanism the contributors draw upon both traditions to explore fieldwork in practice The second edition also reflects major developments of the past decade including the rising prominence of mixed methods the emergence of new

technologies and evolving views on ethnographic writing Spanning the chain of research from designing a project through methods of data collection and interpretive analysis the Handbook features new chapters on ethnography of online communities social survey research and network and geospatial analysis Considered discussion of ethics epistemology and the presentation of research results to diverse audiences round out the volume The result is an essential guide for all scholars professionals and advanced students who employ fieldwork International Handbook of Research in Medical Education Geoffrey R. Norman, Cees P.M. van der Vleuten, D.I. Newble, 2012-12-06 GEOFF NORMAN McMaster University Hamilton Canada CEES VAN DER VLEUTEN University of Maastricht Netherlands DA VID NEWBLE University of Sheffield England The International Handbook of Research in Medical Education is a review of current research findings and contemporary issues in health sciences education The orientation is toward research evidence as a basis for informing policy and practice in education Although most of the research findings have accrued from the study of medical education the handbook will be useful to teachers and researchers in all health professions and others concerned with professional education The handbook comprises 33 chapters organized into six sections Research Traditions Learning The Educational Continuum Instructional Strategies Assessment and Implementing the Curriculum The research orientation of the handbook will make the book an invaluable resource to researchers and scholars and should help practitioners to identify research to place their educational decisions on a sound empirical footing THE FIELD OF RESEARCH IN MEDICAL EDUCATION The discipline of medical education began in North America more than thirty years ago with the founding of the first office in medical education at Buffalo New York by George Miller in the early 1960s Soon after large offices were established in medical schools in Chicago University of Illinois Los Angeles University of Southern California and Lansing Michigan State University All these first generation offices mounted master's level programs in medical education and many of their graduates went on to found offices at other schools Applied Ethnography Pertti J. Peltto, 2013 Ideal for applied researchers students training programs and technical assistance projects in any field this comprehensive guide to applied ethnography distills the expertise of the distinguished anthropologist and methodologist Pertti Peltto over his acclaimed 50 year career **Models in Archaeology** David L. Clarke, 2014-10-24 This major study reflects the increasing significance of careful model formation and testing in those academic subjects that are struggling from intuitive and aesthetic obscurantism toward a more disciplined and integrated approach to their fields of study The twenty six original contributions represent the carefully selected work of progressive archaeologists around the world covering the use of models on archaeological material of all kinds and from all periods from Palaeolithic to Medieval Their common theme is archaeological generalisation by means of explicit model building testing modification and reapplication The contributors seek to show that it is the use of certain models in particular ways that defines archaeology as the practice of one discipline with a set of general tenets that are as applicable in Peru as in Persia Australia as Alaska Sweden as Scotland on material from the second millennium B C to the

second millennium A D They assert that careful model formulation within archaeology and the cautious exchange and testing of models within and beyond the discipline provides the only route to the formation of the common internationally valid body of theory which defines a vigorous and coherent discipline and distinguishes it from being a collection of merely regionally applicable special cases
