Antibiotic Policies Antibiotic Policies:

Antibiotic Policies: Fighting Resistance Ian M. Gould, Jos W.M. van der Meer, 2007-08-19 In 1971 I started a fellowship in infectious diseases and medical microbiology at the Channing Laboratory of the Harvard Medical Service at Boston City Hospital. My mentor Dr Maxwell Finland had encouraged me to return there from the Center for Disease Control as CDC was known then where I had studied infectious diseases epidemiology and hospital associated infection epidemiology with the idea that we would review the demographic patterns of bacteremia and several other infections during Dr Finland's long tenure at the hospital. We did so but I was surprised to find that he also invited me to help with the assessment of the success or failure of the programs to control antimicrobial use that he and colleagues had put into place at the hospital over several years. The paper describing that review finally was published in 1974 after a long and tortuous process of review at several journals. Several reviewers felt that such attempts to improve use amounted to interference with the patient's physician to do what was best. Others felt that such programs focused incorrectly on a subject other than treating the current patient. Fortunately today it is clear that antimicrobial resistance results in major part but not entirely from the ways that we use antimicrobial agents and that the overall interests of patients in general as well as those of society are well served by efforts to use these drugs as well as possible.

Antibiotic Policies Ian M. Gould, Jos W.M. van der Meer, 2006-01-26 For 50 years antibiotics have been dispensed like sweets. This must not be allowed to continue. This unique book assembles contributions from experts around the world concerned with responsible use of antibiotics and the consequences of overuse. For the first time it provides up to the minute texts on both the theoretical aspects of antibiotic stewardship and the practical aspects of its implementation with consideration of the key differences between developed and developing countries. All concerned with teaching practice and administration of clinical medicine, surgery, pharmacy, public health, clinical pharmacology, microbiology, infectious diseases and clinical therapeutics will find *Antibiotic Policies: Theory and Practice* essential reading. Antibiotic use and resistance is not just the responsibility of specialists in the field but the responsibility of all doctors, pharmacists, nurses, healthcare administrators, patients and the general public.

Antibiotic Policies Ian M. Gould, Jos W.M. van der Meer, 2011-09-25 The first book was on Theory and Practice of antibiotic stewardship in its broadest sense: the how to do it and the do's and don'ts. The second on Controlling resistance was very much on the relationships between use and resistance and beginning to home in on the hospital as the main generator of resistance but mainly looking at it from a disease clinical perspective. The last 3 chapters on MRSA ended where the 3rd book will take off. Controlling HAI will concentrate on specific MDR organisms highlighting their roles in the current pandemic of HAI and emphasizing that the big issue is not so much infection control but antibiotic control in the same way that antibiotic over-reliance over use has caused the problem in the first place. Up till now the emphasis for controlling MRSA, C diff and all the other MDROs has very much been on IC which clearly isn't working. This book will gather all the evidence for the increasingly popular view that much more must be done in

the area of antibiotic policies stewardship especially when we are in danger of a post antibiotic era due to a real shortage of new agents in the pipeline

Extending the Cure Ramanan Laxminarayan, Anup Malani, David Howard, David L. Smith, 2010-09-30 Our ability to treat common bacterial infections with antibiotics goes back only 65 years However the authors of this report make it clear that sustaining a supply of effective and affordable antibiotics cannot be without changes to the incentives facing patients physicians hospitals insurers and pharmaceutical manufacturers In fact increasing resistance to these drugs is already exacting a terrible price Every day in the United States approximately 172 men women and children die from infections caused by antibiotic resistant bacteria in hospitals alone Beyond those deaths antibiotic resistance is costing billions of dollars through prolonged hospital stays and the need for doctors to resort to ever more costly drugs to use as substitute treatments Extending the Cure presents the problem of antibiotic resistance as a conflict between individual decision makers and their short term interest and the interest of society as a whole in both present and future The effort that doctors make to please each patient by prescribing a drug when it might not be properly indicated poor monitoring of discharged patients to ensure that they do not transmit drug resistant pathogens to other persons excesses in the marketing of new antibiotics and the broad overuse of antibiotics all contribute to the development and spread of antibiotic resistant bacteria The book explores a range of policy options that would encourage patients health care providers and managed care organizations to serve as more responsible stewards of existing antibiotics as well as proposals that would give pharmaceutical firms greater incentives to develop new antibiotics and avoid overselling If the problem continues unaddressed antibiotic resistance has the potential to derail the health care system and return us to a world where people of all ages routinely die from simple infections As a basis for future research and a spur to a critically important dialogue Extending the Cure is a fundamental first step in addressing this public health crisis The Extending the Cure project is funded in part by the Robert Wood Johnson Foundation through its Pioneer Portfolio

pathogen resistance are rendering current antibiotics obsolete Coupled with insufficient investment in discovering new treatments multidrug resistant infections are an increasingly urgent public health concern To curb the growth of antibiotic resistance and prevent major morbidity and mortality from multidrug resistant bacterial infections the overuse of antibiotics must be addressed and research and development for antibiotics with novel mechanisms of action actively promoted This requires appropriately designed incentives for health and regulatory systems in addition to economic incentives to attract academic interest and industry investment This book commissioned by the Swedish Government from the European Observatory on Health Systems and Policies analyzes many proposed policies and incentive mechanisms and sheds light on the key issues that will help policy makers reach informed concrete decisions on how to avert this potential public health crisis
