Antibody Expression And Production Cell Engineering:

Antibody Expression and Production Mohamed Al-Rubeai, 2011-05-16 Engineered antibodies currently represent over 30% of biopharmaceuticals in clinical trials and their total worldwide sales continue to increase significantly. The importance of antibody applications is reflected in their increasing clinical and industrial applications as well as in the progression of established and emerging production strategies. This volume provides detailed coverage of the generation, optimization, characterization, production, and applications of antibody. It provides the necessary theoretical background and description of methods for the expression of antibody in microbial and animal cell cultures and in transgenic animals and plants. There is a strong focus on those issues related to the production of intrabodies, bispecific antibody and antibody fragments and also to novel applications in cancer immunotherapy.

Cell Line Development Mohamed Al-Rubeai, 2009-08-11 Mammalian cell lines command an effective monopoly for the production of therapeutic proteins that require post translational modifications. This unique advantage outweighs the costs associated with mammalian cell culture which are far greater in terms of development time and manufacturing when compared to microbial culture. The development of cell lines has

undergone several advances over the years essentially to meet the requirement to cut the time and costs associated with using such a complex hosts as production platforms This book provides a comprehensive guide to the methodology involved in the development of cell lines and the cell engineering approach that can be employed to enhance productivity improve cell function glycosylation and secretion and control apoptosis It presents an overall picture of the current topics central to expression engineering including such topics as epigenetics and the use of technologies to overcome positional dependent inactivation the use of promoter and enhancer sequences for expression of various transgenes site directed engineering of defined chromosomal sites and examination of the role of eukaryotic nucleus as the controller of expression of genes that are introduced for production of a desired product It includes a review of selection methods for high producers and an application developed by a major biopharmaceutical industry to expedite the cell line development process The potential of cell engineering approach to enhance cell lines through the manipulation of single genes that play important roles in key metabolic and regulatory pathways is also explored throughout
