Parametric Packet-based Audiovisual Quality Model for IPTV services Marie-Neige Garcia, 2014-06-20 This volume presents a parametric packet based comprehensive model to measure and predict the audiovisual quality of Internet Protocol Television services as it is likely to be perceived by the user The comprehensive model is divided into three sub models referred to as the audio model the video model and the audiovisual model The audio and video models take as input a parametric description of the audiovisual processing path and deliver distinct estimates for both the audio and video quality These distinct estimates are eventually used as input data for the audiovisual model This model provides an overall estimate of the perceived audiovisual quality in total The parametric description can be used as diagnostic information The quality estimates and diagnostic information can be practically applied to enhance network deployment and operations Two applications come to mind in particular Network planning and network service quality monitoring The audio model can be used indifferently for both applications However two variants of the video model have been developed in order to address particular needs of the applications mentioned above The comprehensive model covers effects due to resolution coding and IP packet loss in case of RTP type transport The model applied to quality monitoring is standardized under the ITU T Recommendations P 1201 and P 1201 2

Fourth-Generation Wireless Networks: Applications and Innovations Adibi, Sasan, Mobasher, Amin, Tofighbakhsh,

Mostafa,2009-12-31 Fourth Generation Wireless Networks Applications and Innovations presents a comprehensive collection of recent findings in access technologies useful in the architecture of wireless networks **Intelligent Multimedia**

Technologies for Networking Applications: Techniques and Tools Kanellopoulos, Dimitris,2013-01-31 As ubiquitous multimedia applications benefit from the rapid development of intelligent multimedia technologies there is an inherent need to present frameworks techniques and tools that adopt these technologies to a range of networking applications Intelligent Multimedia Technologies for Networking Applications Techniques and Tools promotes the discussion of specific solutions for improving the quality of multimedia experience while investigating issues arising from the deployment of techniques for adaptive video streaming This reference source provides relevant theoretical frameworks and leading empirical research findings and is suitable for practitioners and researchers in the area of multimedia technology *Game Sound Technology*

and Player Interaction: Concepts and Developments Grimshaw, Mark,2010-09-30 Game Sound Technology and Player Interaction Concepts and Developments researches both how game sound affects a player psychologically emotionally and physiologically and how this relationship itself impacts the design of computer game sound and the development of technology This compilation also applies beyond the realm of video games to other types of immersive sound such as soundscape design gambling machines emotive and fantastical sound to name a few The application for this research is wide ranging interdisciplinary and of primary importance for academics and practitioners searching for the right sounds

Artificial Intelligence Resources in Control and Automation Engineering Evelio J. González,Alberto F. Hamilton Castro,Leopoldo Acosta Sánchez,2012 This e book focuses on the application of artificial intelligence resources in fields related to Control and Automation Engineering Techniques such as neural networks fuzzy logic and expert systems are a key tool for researchers and engineers requiring *End-to-End Adaptive Congestion Control in TCP/IP Networks* Christos N. Houmkozi,George A. Rovithakis,2017-12-19 Establishing adaptive control as an alternative framework to design and analyze Internet congestion controllers End to End Adaptive Congestion Control in TCP IP Networks employs a rigorously mathematical approach coupled with a lucid writing style to provide extensive background and introductory material on dynamic systems stability and neural network approximation alongside future internet requests for congestion control architectures Designed to operate under extreme heterogeneous dynamic and time varying network conditions the developed controllers must also handle network modeling structural uncertainties and uncontrolled traffic flows acting as external perturbations The book also presents a parallel examination of specific adaptive congestion control NNRC using adaptive control and approximation theory as well as extensions toward cooperation of NNRC with application QoS control Features Uses adaptive control techniques for congestion control in packet switching networks Employs a rigorously mathematical approach with lucid writing style Presents simulation experiments illustrating significant operational aspects of the method including scalability dynamic behavior wireless networks and fairness Applies to networked applications in the music

industry computers image trading and virtual groups by techniques such as peer to peer file sharing and internet telephony Contains working examples to highlight and clarify key attributes of the congestion control algorithms presented Drawing on the recent research efforts of the authors the book offers numerous tables and figures to increase clarity and summarize the algorithms that implement various NNRC building blocks Extensive simulations and comparison tests analyze its behavior and measure its performance through monitoring vital network quality metrics Divided into three parts the book offers a review of computer networks and congestion control presents an adaptive congestion control framework as an alternative to optimization methods and provides appendices related to dynamic systems through universal neural network approximators
