Auricchio Chimica:

Chimica: preparazione e autovalutazione per l'esame Sergio Auricchio, 2024-01-05 Le modalità di verifica delle conoscenze degli studenti negli anni si sono notevolmente evolute per adeguarsi a esigenze dovute a nuove organizzazioni didattiche. Così in alternativa ai classici problemi e domande a risposta aperta si diffuse l'utilizzo di domande a risposta chiusa. Le prove a risposta chiusa e i test sono un insieme di domande già corredate da risposte tra cui scegliere quella corretta e sono utilizzati sempre più frequentemente sia per valutare l'idoneità alla frequenza di corsi universitari dei neo diplomati sia per verificare le conoscenze acquisite nello studio di materie universitarie. Per fornire agli studenti un ausilio a questa metodologia d'esame nel 2003 ho preparato insieme al prof. Aldo Ricca il testo *Chimica Guida* a una valutazione critica. Questo testo proponeva agli studenti per valutare la propria preparazione solo domande a risposta chiusa. Ovviamente il rischio insito in questo tipo di valutazione di disabituare o non abituare lo studente universitario a riflessioni speculative sulla materia e pertanto di non esaltare le capacità logiche che consentono collegamenti tra i diversi concetti acquisiti che sono la base per una buona formazione professionale. Per minimizzare questo rischio le domande e le relative risposte erano state formulate in modo tale da costringere lo studente a utilizzare anche la logica e non soltanto le nozioni. Infatti la maggior parte degli studenti tende più che a individuare la risposta corretta a scartare le affermazioni errate. In questo modo se anche nello scartare risposte errate lo studente è costretto a utilizzare oltre alle nozioni anche concetti e capacità logiche lo scopo di una corretta verifica è stato comunque raggiunto. In tutti i casi lo studente medio si disabituava a organizzare le idee per dare risposte scritte che devono essere necessariamente puntuali e sintetiche e non acquisisce le capacità che gli permetteranno un domani di partecipare in modo corretto a discussioni di lavoro o di redigere una eventuale relazione scientificamente corretta e comprensibile. Per ovviare a quanto sopra detto in questo nuovo testo per ogni capitolo è stata aggiunta una parte con domande a risposta aperta seguite da possibili risposte corrette. Sono stati aggiunti due capitoli trattando quindici argomenti della chimica di base dove ogni capitolo è diviso in quattro parti: nella prima sono formulate domande a risposta chiusa con annesse cinque affermazioni; nella seconda sono formulate domande a risposta aperta presenti nei temi d'esame dati nel corso degli anni nei corsi di Chimica del Politecnico di Milano; nella terza parte tutte le affermazioni fatte nella prima parte sia giuste sia errate sono discusse in modo critico mettendo in evidenza perché se corrette devono essere accettate o perché devono essere giudicate inaccettabili; nella quarta parte sono date le soluzioni o le risposte che uno studente avrebbe dovuto dare alle domande a risposta aperta. Tenendo presente che ad alcune domande è possibile rispondere in più di un modo le risposte date non sono le sole possibili. Ritengo che questo volume possa essere una guida utile sia per stimolare l'apprendimento della Chimica sia per affinare le capacità critiche necessarie per un futuro e proficuo utilizzo delle conoscenze della materia. Ovviamente l'utilizzo di questa guida deve seguire lo studio di un testo di Chimica organicamente svolto e organizzato. Infatti per ogni capitolo è indicata una serie di conoscenze che si suppone siano già state acquisite.
