Travis, 2000-10-31 Heinrich Caro 1834 1910 was the inventor of new chemical processes that in the two decades commencing in 1869 enabled BASF of Ludwigshafen Germany to take first place among manufacturers of synthetic dyestuffs The cornerstones of Caro's success were his early training as calico cotton printer in Germany and his employment at a chemical firm in Manchester England Caro was a creative research chemist a highly knowledgeable patent specialist and expert witness and a brilliant manager of science based chemical technology This first full length scientific biography of Heinrich Caro delineates his role in the emergence of the industrial research laboratory the forging of links between academic and industrial chemistry and the development of modern patent law Major chemical topics include the rise of classical organic chemistry collaboration with Adolf Baeyer artificial alizarin and indigo aniline dyes and other coal tar products particularly intermediates **A Delicate Choreography** David Sabeen, 2023-10-24 The origins of the incest taboo

have puzzled many of the most influential minds of the West from Plutarch to St Augustine St Thomas Aquinas Martin Luther David Hume Lewis Henry Morgan Sigmund Freud Emile Durkheim Edward Westermarck and Claude Lévi Strauss This book puts the discussion of incest on a new foundation It is the first attempt to thoroughly examine the rich literature from philosophical theological and legal treatises to psychological and biological genetic studies to a wide variety of popular cultural media over a long period of time The book offers a detailed examination of discursive and figurative representations of incest during five selected periods from 1600 to the present The incest discussion for each period is complemented with a presentation of dominant kinship structures and changes without arguing for causal relations Part I deals with the legacy of

ecclesiastical marriage prohibitions of the Middle Ages Historians dealing with the Reformation have wondered about the political and social implications of theological debates about the incest rules the Enlightenment opted for sociological considerations of the household and a new anthropology based on the passions Baroque discourse focused upon sexual relations among kin by marriage while Enlightenment and Romantic discussions worried the intimacy of siblings The first section of Part II deals with the six decades around 1900 during which European and American cultures obsessed about the sexuality of women Almost everyone concurred in the idea that mother made the family what it was that she configured the household kept the lines of kinship vibrant and stood at the threshold as stern gatekeeper and many thought that she managed these tasks through her sexuality and an eroticized relationship with sons Another story line taken up in the section Intermezzo this one about the physical and mental consequences of inbreeding appeared after 1850 To what extent do close kin marriages pose risks for progeny At its center lay the incest problematic now restated Is avoidance of kin genetically programmed Do all cultures know about risks of consanguinity As for the twenty first century evolutionary and genetic assumptions are challenged by a living world population containing roughly one billion offspring of cousin marriages Part III deals with one of the perhaps most remarkable reconfigurations of Western kinship in the aftermath of World War I The shift from an endogamous to an exogamous alliance system centered on the nuclear family An historical anomaly this family form began to dissolve almost as soon as it came together and in the process shifted the focus of incest concerns to a new pairing father and daughter By the 1970s when the father daughter problematic swept all other considerations of incest aside that relationship had come to be modeled for the most part around power and its abusive potential As for incest its representations in the last three decades of the twentieth century no longer focused on biologically damaged progeny but rather on power abuses in the nuclear family sexual abuse By the mid 1990s Western culture at least partly redirected its gaze away from father and daughter towards siblings especially towards brothers and sisters and the sexual boundaries and erotics of their relationships Correspondingly siblings became a model organism for psychotherapy evolutionary biology and the science of genetics

The Kaiser's Chemists Jeffrey Allan Johnson, 2017-03-01 In the early twentieth century an elite group of modern minded scientists in Germany led by the eminent organic chemist Emil Fischer set out to create new centers and open new sources of funding for chemical research Their efforts led to the establishment in 1911 of the chemical institutes of the Kaiser Wilhelm Society for the Advancement of the Sciences whose original staff included several future Nobel laureates Although these institutes were designed to promote free research that would uphold German Leadership in international science they also came to promote the integration of science in the German war effort after 1914 According to Jeffrey Johnson the development of the Kaiser Wilhelm Institutes exemplifies the origins and dilemmas of one of the most significant innovations in modern science the creation of institutions for basic research both theoretical and practical The Kaiser Wilhelm Society was a quasi official institution under the protection of Kaiser Wilhelm II but it received most of its

funding from German industry rather than the Imperial Treasury After 1914 however the Kaiser's chemists and their institutes provided key support to the German war effort Within a few months of the outbreak of World War I the institutes had been integrated into war mobilization activities They conducted research both in weapons such as poison gas and in strategic resources especially synthetics to replace naturally produced goods cut off by Britain's blockade of German ports By examining the Kaiser Wilhelm Society in the framework of both scientific and social change Johnson is able to answer questions that seem puzzling if not viewed from this dual perspective such as why German chemists pushed for institutional change at this particular time Johnson argues that the new institutes arose from a characteristically modern tension between internationally set scientific goals and the competing national priorities of a country headed for war Johnson's sources include the papers of Emil Fischer the archives of several major German corporations including Bayer Hoechst and Krupp government records and the archives of the Max Planck Society which grew out of the Kaiser Wilhelm Society after World War II Originally published in 1990 A UNC Press Enduring Edition UNC Press Enduring Editions use the latest in digital technology to make available again books from our distinguished backlist that were previously out of print These editions are published unaltered from the original and are presented in affordable paperback formats bringing readers both historical and cultural value

Lesch, 2013-04-17 In the twentieth century dyes pharmaceuticals photographic products explosives insecticides fertilizers synthetic rubber fuels and fibers plastics and other products have flowed out of the chemical industry and into the consumer economies war machines farms and medical practices of industrial societies The German chemical industry has been a major site for the development and application of the science based technologies that gave rise to these products and has had an important role as exemplar stimulus and competitor in the international chemical industry This volume explores the German chemical industry's scientific and technological dimension its international connections and its development after 1945 The authors relate scientific and technological change in the industry to evolving German political and economic circumstances including two world wars the rise and fall of National Socialism the post war division of Germany and the emergence of a global economy This book will be of interest to historians of modern Germany to historians of science and technology and to business and economic historians
