Inductively Coupled Plasma Emission Spectroscopy, Part 2 P. W. J. M. Boumans, 1987-06-23 In the 1960s the development of inductively coupled plasmas ICP as excitation sources for atomic emission spectroscopy AES permitted for the first time the convenient simultaneous determination of a number of chemical elements in solutions In two self contained volumes this is the first definitive text reference on ICP AES since the introduction of this important analytical technique Part 1 of Inductively Coupled Plasma Emission Spectroscopy covers the basis of ICP AES as an analytical method and discusses fundamental analytical concepts performance and figures of merit principles of the instrumentation the relation between ICP and other modern plasma sources and the connection between ICP AES on one hand and ICP atomic fluorescence spectroscopy and ICP mass spectroscopy on the other Part 2 examines applications and fundamentals of the technique The overall treatment of the subject is tutorial systematic and consistent The approach is scientific and rigorous but mathematical formulae are used only when they promote clarity Aside from filling a void in the AES literature Inductively Coupled Plasma Emission Spectroscopy provides a critical survey of more than 20 years of research development and application in the field of ICP and related plasma sources It is an excellent handbook for both novices and experts and it serves as an aidememoire and major source of reference for analytical spectroscopists analytical chemists physical chemists and physicists including those who are researchers technicians and applied analysts Forensic Examination of Glass and Paint Brian Caddy, 2001-08-23 This volume represents an approach to the analysis of glass and paint as they occur as trace evidence in forensic cases Each chapter is written by an expert in their particular area.
