successful biodiesel business, 2006 **Developments in Biodiesel** R. Geetha Balakrishna, Sakar Mohan, Tamer Zaki Sharara, 2024-06-28 Transportation remains one of the largest contributors to global carbon dioxide emissions with the majority of vehicles using fossil-based fuels such as gasoline and diesel. Therefore, alternatives that come from a renewable feedstock and create fewer carbon emissions are urgently needed. Biodiesel, an alternative to fossil-based diesel fuel, can be produced from renewable or waste feedstocks such as biomass, animal fats, and industrial wastes, making it much more sustainable. However, challenges remain in improving and refining the properties of biodiesel, developing production processes, and choosing feedstocks with optimal sustainability. Focusing on recent advances in the areas of feedstocks for biodiesel production processes and testing and enhancement of properties, *Developments in Biodiesel* provides a balance between academic and industrial viewpoints across a range of topics. It is an ideal reference for both academics and industrialists interested in sustainable energy, sustainable fuels, and biomass waste valorisation. **Advances in Biorefineries**

Keith W. Waldron, 2014-04-28 Biorefineries are an essential technology in converting biomass into biofuels or other useful materials. *Advances in Biorefineries* provides a comprehensive overview of biorefining processing techniques and technologies and the biofuels and other materials produced. Part one focuses on methods of optimizing the biorefining process and assessing its environmental and economic impact. It also looks at current and developing technologies for producing value-added materials. Part two goes on to explore these materials with a focus on biofuels and other value-added products. It considers the properties, limitations, and practical applications of these products and how they can be used to meet the increasing demand for renewable and sustainable fuels as an alternative to fossil fuels. *Advances in Biorefineries* is a vital reference for biorefinery process engineers, industrial biochemists, chemists, biomass waste scientists, and researchers and academics in the field.
