practices with hands on exercises Learn data based document manipulation using D3 js Adapt your current strategies to responsive workflows Data is growing exponentially and the need to visualize it in any context has become crucial Traditional visualizations allow important data to become lost when viewed on a small screen and the web traffic speaks for itself viewers repeatedly demonstrate their preference for responsive design If you re ready to create more accessible take anywhere visualizations Building Responsive Data Visualization for the Web is your tailor made solution *Learning Responsive Data Visualization* Christoph Korner,2016-03-23 Master the art of building responsive visualizations on the Web About This Book Learn the techniques for building data visualizations that work well for all screen sizes Implement responsive techniques with popular libraries to get to grips with building responsive visualizations that work in the real world Incorporate responsive workflow in your data visualization process to build visualizations that take a mobile first approach Who This Book Is For Web developers and data science professionals who want to make their visualizations work for smaller screen sizes Some basic knowledge of JavaScript and Data visualization is expected What You Will Learn Get familiar with responsive design for data visualizations Understand the main concepts of D3 js to create interactive visualizations Unleash the power of Bootstrap to create stunning and responsive visualizations for all screen resolutions Implement Touch and Mouse interactions for mobile first applications Design Transitions and Animations that impress in portrait and landscape Build a Responsive World Map using GeoJSON and D3 js In Detail Using D3 js and Responsive Design principles you will not just be able to implement visualizations that look and feel awesome across all devices and screen resolutions but you will also boost your productivity and reduce development time by making use of Bootstrap the most popular framework for developing responsive web applications This book teaches the basics of scalable vector graphics SVG D3 js and Bootstrap while focusing on Responsive Design as well as mobile first visualizations the reader will start by discovering Bootstrap and how it can be used for creating responsive applications and then implement a basic bar chart in D3 js You will learn about loading parsing and filtering data in JavaScript and then dive into creating a responsive visualization by using Media Queries responsive interactions for Mobile and Desktop devices and transitions to bring the visualization to life In the following chapters we build a fully responsive interactive map to display geographic data using GeoJSON and set up integration testing with Protractor to test the application across real devices using a mobile API gateway such as AWS Device Farm You will finish the journey by discovering the caveats of mobile first applications and learn how to master cross browser complications Style and approach As the world shifts to mobile devices for consuming data on the Web developers are faced with the unique challenge of making data visualizations work for their smaller screens The growth of responsive web design enabled developers to adopt page layouts and media for smaller screens but there is still little information available on how to adapt data visualizations for the smaller screens This book fills this important gap and shows how responsive web design principles can be extended to create visualizations that work well regardless of the screen size

thereby allowing developers to build user friendly visualizations that work well on all devices In addition to covering some of the popular techniques and design patterns for building responsive visualizations the book also shows readers how to implement these techniques with the help of some popular tools and libraries

Building Responsive Data

Visualizations with D3.js Merrill Cook,2015 This video course starts out by describing ways in which D3 js fits into existing web standards to provide data visualization solutions that can be easily integrated After working through the basic flow of simple visualizations we ll start adding features tool tips axes and scales We ll take a look at interactivity and transitions Then we ll walk through the use of external data sources including CSV TSV JSON and GeoJSON which will prepare us for more in depth visualizations Further on we ll tackle responsive design covering all the basic concepts and then work our way through a site mockup the old fashioned way looking for breakpoints and using media queries to provide smooth screen size transitions Our work with responsive design will then be applied to a number of our early data visualizations We ll resume our focus on responsive design later in the course when we ll cover using Bootstrap and Pym js a JavaScript library that enables the embedding of responsive iFrames The data visualizations we ll tackle in the final sections of the course will include mapping with Topo and GeoJSON By the end of this course you will have an armory full of tools to create feature rich data visualizations with D3 js that are responsive on different platforms Resource description page

Mobile Data

Visualization Bongshin Lee,Raimund Dachzelt,Petra Isenberg,Eun Kyoung Choe,2021-12-22 Mobile Data Visualization is about facilitating access to and understanding of data on mobile devices Wearable trackers mobile phones and tablets are used by millions of people each day to read weather maps financial charts or personal health meters What is required to create effective visualizations for mobile devices This book introduces key concepts of mobile data visualization and discusses opportunities and challenges from both research and practical perspectives Mobile Data Visualization is the first book to provide an overview of how to effectively visualize analyze and communicate data on mobile devices Drawing from the expertise research and experience of an international range of academics and practitioners from across the domains of Visualization Human Computer Interaction and Ubiquitous Computing the book explores the challenges of mobile visualization and explains how it differs from traditional data visualization It highlights opportunities for reaching new audiences with engaging interactive and compelling mobile content In nine chapters this book presents interesting perspectives on mobile data visualization including how to characterize and classify mobile visualizations how to interact with them while on the go and with limited attention spans how to adapt them to various mobile contexts specific methods on how to design and evaluate them reflections on privacy ethical and other challenges as well as an outlook to a future of ubiquitous visualization This accessible book is a valuable and rich resource for visualization designers practitioners researchers and students alike
