Stevens, 2012-11-12 This best selling text is written for those who use rather than develop statistical methods Dr Stevens focuses on a conceptual understanding of the material rather than on proving results Helpful narrative and numerous examples enhance understanding and a chapter on matrix algebra serves as a review Annotated printouts from SPSS and SAS indicate what the numbers mean and encourage interpretation of the results In addition to demonstrating how to use these packages the author stresses the importance of checking the data assessing the assumptions and ensuring adequate sample size by providing guidelines so that the results can be generalized The book is noted for its extensive applied coverage of MANOVA

its emphasis on statistical power and numerous exercises including answers to half The new edition features New chapters on Hierarchical Linear Modeling Ch 15 and Structural Equation Modeling Ch 16 New exercises that feature recent journal articles to demonstrate the actual use of multiple regression Ch 3 MANOVA Ch 5 and repeated measures Ch 13 A new appendix on the analysis of correlated observations Ch 6 Expanded discussions on obtaining non orthogonal contrasts in repeated measures designs with SPSS and how to make the identification of cell ID easier in log linear analysis in 4 or 5 way designs Updated versions of SPSS 15.0 and SAS 8.0 are used throughout the text and introduced in chapter 1 A book website with data sets and more Ideal for courses on multivariate statistics found in psychology education sociology and business departments the book also appeals to practicing researchers with little or no training in multivariate methods Prerequisites include a course on factorial ANOVA and covariance Working knowledge of matrix algebra is not assumed **Applied**

Multivariate Research Lawrence S. Meyers, Glenn Gamst, A.J. Guarino, 2006 Multivariate designs were once the province of the very few exalted researchers who understood the underlying advanced mathematics Today through the sophistication of statistical software packages such as SPSS virtually all graduate students across the social and behavioural sciences are exposed to the complex multivariate statistical techniques without having to learn the mathematical computations needed to acquire the data output These students in psychology education political science etc will never be statisticians and appropriately so their preparation and coursework reflects less of an emphasis on the mathematical complexities of multivariate statistics and more on the analysis and the interpretation of the methods themselves and the actual data output This book provides full coverage of the wide range of multivariate topics in a conceptual rather than mathematical approach The author gears toward the needs level of sophistication and interest in multivariate methodology of students in applied areas that need to focus on design and interpretation rather than the intricacies of specific computations The book includes Coverage of the most widely used multivariate designs multiple regression exploratory factor analysis MANOVA and structural equation modeling Integrated SPSS examples for hands on learning from one large study for consistency of application throughout the text Examples of written results to enable students to learn how the results of these procedures are communicated Practical application of the techniques using contemporary studies that will resonate with students
