Mann,2006-10-10 NATIONAL BESTSELLER A groundbreaking work of science history and archaeology that radically alters our understanding of the Americas before the arrival of Columbus in 1492 from a remarkably engaging writer The New York Times Book Review Contrary to what so many Americans learn in school the pre Columbian Indians were not sparsely settled in a pristine wilderness rather there were huge numbers of Indians who actively molded and influenced the land around them The astonishing Aztec capital of Tenochtitlan had running water and immaculately clean streets and was larger than any contemporary European city Mexican cultures created corn in

a specialized breeding process that it has been called man's first feat of genetic engineering. Indeed, Indians were not living lightly on the land but were landscaping and manipulating their world in ways that we are only now beginning to understand. Challenging and surprising this is a transformative new look at a rich and fascinating world we only thought we knew.

Where the Land Meets the Sea Tom D. Dillehay, 2017-08-01 Huaca Prieta, one of the world's best known yet least understood early maritime mound sites and other Preceramic sites on the north coast of Peru bear witness to the beginnings of civilization in the Americas. Across more than fourteen millennia of human occupation, the coalescence of maritime agricultural and pastoral economies in the north coast settlements set in motion long-term biological and cultural transformations that led to increased social complexity and food production and later the emergence of preindustrial states and urbanism. These developments make Huaca Prieta a site of global importance in world archaeology. This landmark volume presents the findings of a major archaeological investigation carried out at Huaca Prieta, the nearby mound Paredones, and several Preceramic domestic sites in the lower Chicama Valley between 2006 and 2013 by an interdisciplinary team of more than fifty international specialists. The book's contributors report on and analyze the extensive material records from the sites, including data on the architecture and spatial patterns, floral, faunal, and lithic remains, textiles, basketry, and more. Using this rich data, they build new models of the social, economic, and ontological practices of these early peoples who appear to have favored cooperation and living in harmony with the environment over the accumulation of power and the development of ruling elites. This discovery adds a crucial new dimension to our understanding of emergent social complexity, cosmology, and religion in the Neolithic period.

Kasapata and the Archaic Period of the Cuzco Valley Brian S. Bauer, 2007-12-31 Although the Cuzco Valley of Peru is renowned for being the heartland of the Incas, little is known concerning its pre-Inca inhabitants. Until recently, it was widely believed that the first inhabitants of the Cuzco Valley were farmers who lived in scattered villages along the valley floor ca. 1000 BC and that there were no Archaic Period remains in the region. This perspective was challenged during a systematic survey of the valley when numerous preceramic sites were found. Additional information came from excavations at the site of Kasapata, the largest preceramic site identified during the survey. It is now clear that the Cuzco Valley was inhabited like many other regions of the Andes soon after the retreat of the Pleistocene glaciers and that it supported thriving cultures of hunters and foragers for hundreds of generations before the advent of permanent settlements. This edited volume provides the first overview of the Archaic Period (9000–2200 BC) in the Cuzco Valley. The chapters include a detailed discussion of the distribution of Archaic sites in the valley as well as the results of excavations at the site of Kasapata. Separate chapters are dedicated to examining the lithics, human burials, faunal remains, and obsidian recovered at this remarkably well-preserved site.
