Building High Tech Clusters Silicon Valley And Beyond:

Building High-Tech Clusters Timothy Bresnahan,Alfonso Gambardella,2004-04-05 This book was first published in 2004 National economic growth is fueled by the development of high technology clusters such as Silicon Valley The contributors examine the founding of ten clusters that have been successful at an early stage of growth in information technology Their key finding is that the economics of starting a cluster is very different from the positive feedback loop that sustains an established cluster While nothing succeeds like success in an established cluster far more difficult risky and unlikely are the initial conditions that give rise to successful clusters The contributors find regularities in the start of the successful clusters studied including Silicon Valley around 1964 These cases contain old economy factors such as competencies firm building capabilities managerial skills and connection to markets more than the flamboyant new economy factors that have been highlighted in prevailing years Building High-tech Clusters Timothy F. Bresnahan,Alfonso Gambardella,2004

Pathways to High-Tech Valleys and Research Triangles Willem Hulsink,J. J. M. Dons,2008-05-23 About the book The contents of most of the chapters included in this volume were originally presented and discussed during the academic workshop High tech Valleys and Research Triangles in the East of the Netherlands and elsewhere held on 30 November and 1 December 2005 at the Wageningen International Congress Centre WICC in the Netherlands At that time we had an informal agreement with Rob Bogers series editor of the Wageningen UR Frontis book series that if the quality and quantity of the talks and papers at the seminar would be sufficient and if there was willingness among the potential authors an edited book volume based upon the results of the workshop would be a possibility After the workshop when we had a critical mass of ten chapters and a dedicated group of committed authors the book project was given the green light As editors we realized that there were still a couple of topics and themes missing and when we had found colleagues for these four additional chapters that needed to be written our Frontis book was on the roll Although most of the time it was great fun the whole process of writing reviewing rewriting editing and proofreading took a lot of time much more time than we originally had foreseen We would like to thank all authors of the fourteen chapters of this book for their excellent contributions **Infinite**

and technology laws governing exceptional creativity and innovation have yet to be discovered In his influential study *The Structure of Scientific Revolutions* the historian Thomas Kuhn noted that the final stage in a scientific breakthrough such as Albert Einstein's theory of relativity the most crucial step was inscrutable The same is still true half a century later Yet there has been considerable progress in understanding many stages and facets of exceptional creativity and innovation In *Exceptional Creativity in Science and Technology* editor Andrew Robinson gathers diverse contributors to explore this progress This new collection arises from a symposium with the same title held at the Institute for Advanced Study IAS in Princeton Organized by the John Templeton Foundation the symposium had the late distinguished doctor and geneticist Baruch S Blumberg as its chair At the same time its IAS host was the well known physicist Freeman J Dyson both of whom have contributed chapters to the book In addition to scientists engineers and an inventor the book's fifteen contributors include an economist entrepreneurs historians and sociologists all working at leading institutions including Bell Laboratories Microsoft Research Oxford University Princeton University and Stanford University Each contributor brings a unique perspective to the relationships between exceptional scientific creativity and innovation by individuals and institutions The diverse list of disciplines covered the high profile contributors including two Nobel laureates and their fascinating insights into this overarching question how exactly do we make breakthroughs will make this collection of interest to anyone involved with the creative process in any context Still it will especially appeal to readers in scientific and technological fields

Entrepreneurship, Growth, and Public Policy Zoltan J. Acs, David B. Audretsch, Robert J. Strom, 2009-02-02 This volume provides a lens to analyze public policy decisions involving entrepreneurship **From Underdogs to Tigers** Ashish Arora, Alfonso Gambardella, 2005-03-03 In 1980 the Indian software industry was practically non-existent By the 1990s the industry was one of the largest employers in manufacturing Similar patterns of growth can be found in other emerging economies So given that the software industry is commonly viewed as a high tech industry how is it that such spectacular growth has occurred in countries where high tech industries would not seem likely to develop This book examines the reasons behind this phenomenon and asks whether it suggests a new model of economic development The contributors explore the implications of the rise of these newcomers to the software market for the global industry and whether there are things to be learnt about the role of human capital in economic growth firm formation and capabilities business and managerial models and industry structure Chapters include country studies on Brazil China India Ireland and Israel and are complemented by cross cutting chapters on some of the key issues highlighted by the growth patterns of software in these nations most notably the role of the multinational companies the globalization of the skilled worker flows and the formation of firm capabilities The novelty of the growth patterns in the regions that studied makes this book useful for understanding analytical and empirical issues underlying new microfoundations of economic growth in some emerging regions of the world

Technological Communities and Networks Dimitris Assimakopoulos, 2007-05-17 Timely and topical this book explores

how technological communities and networks shape a broad range of new computer based technologies in regional national and international contexts Entrepreneurship and Talent Management from a Global Perspective Huiyao Wang,Yipeng Liu,2016-01-29 Talent has become the most important resource for organizations across a wide range of sectors throughout the world including business non profit and government These organizations are now engaged in an increasingly fierce competition to acquire the best talent as they seek to gain the upper hand in today s fast changing environment By combining the body of knowledge on entrepreneurship and talent management from a global perspective this book provides a synthesized understanding of entrepreneurial mobility and talent management in the entrepreneurship and innovation ecosystem The expert contributors combine empirical evidence and case studies to provide a nuanced understanding of global talent management from an international comparative perspective The topics discussed include China s return migration and its impact on Chinese development local engagement and transformation of Chinese communities in England and reverse migration from the US to China Furthermore from a comparative perspective contributors examine global talent and entrepreneurial mobility in the contexts of Silicon Valley European university spin off practices and entrepreneurial ecosystems in France Italy and South Korea respectively Scholars and students in entrepreneurship and talent management will find the scope for future research useful in their work Entrepreneurs managers and policymakers will benefit from the examination of global perspectives and different national contexts *The Digital Economy* Edward J. Malecki,Bruno Moriset,2007-12-07 Information technologies IT shape economic space but we have no clear map of the cyber economy since the digital revolution began in the early 1970s The Digital Economy offers an up to date critical synthesis that links the various aspects of the digital or cyber economy from the perspective of real firms A geographic approach emphasizes how IT has made businesses less dependent on locational constraints and the tangible effects on places and regions are placed at the core of the analysis Case studies of companies including Amazon Dell Li Fung and Volvo demonstrate that the geography of digitally driven production is the outcome of both dispersion and agglomeration dynamics Global corporations are shown to have footprints that ignore to some degree distance and time yet creative and coordinating activities remain anchored in urban innovative ecosystems such as Silicon Valley and Bangalore These trends have been made possible by the development of a worldwide and integrated telecommunications network whose unequal presence dictates the capabilities of places and communities to be connected to the global economy However the threat of the digital divide must not be overstated In cities rural areas and emerging countries local development is wrapped up in human capital rather than technology This engaging and accessible text describes and explains the patterns and dynamics of today s digital economic space The effects on places and regions and the people in them are at the core of the authors analysis illustrated by many real examples This book will be useful to anyone studying business and management geography and information and communication studies
