Adsorption Analysis: Equilibria And Kinetics (With Cd Containing Computer Matlab Programs) Duong D Do, 1998-09-22 This book covers topics of equilibria and kinetics of adsorption in porous media Fundamental equilibria and kinetics are dealt with for homogeneous as well as heterogeneous particles Five chapters of the book deal with equilibria and eight chapters deal with kinetics Single component as well as multicomponent systems are discussed In kinetics analysis we deal with the various mass transport processes and their interactions inside a porous particle Conventional approaches as well as the new approach using Maxwell Stefan equations are presented Various methods to measure diffusivity such as the Differential Adsorption Bed DAB the time lag the diffusion cell chromatography and the batch adsorber methods are also covered by the book It can be used by lecturers and engineers who wish to carry out research in adsorption A number of programming codes written in MatLab language are included so that readers can use them directly to better understand the behavior of single and multicomponent adsorption systems Gas Separation By Adsorption Processes Ralph T Yang, 1997-06-19 Gas Separation by Adsorption Processes is a complete treatise on all aspects of adsorptive processes It covers all fundamental principles as well as process design and simulation of gas adsorption processes for separation and purification This highly popular book in the field has now been reprinted and made available in paperback form *Batch Distillation: Design And Operation* Iqbal M Mujtaba, 2004-03-29 The batch distillation process has existed for many centuries It is perhaps the oldest technology for separating or purifying liquid mixtures and is the most frequently used separation method in batch processes In the last 25 years with continuous development of faster computers and sophisticated numerical methods there have been many published works using detailed mathematical models with rigorous physical property calculations and advanced optimisation techniques to address several important issues such as selection of column configurations design operation off cut recycling use of batch distillation in reactive and extractive modes etc Batch Distillation Design and Operation presents excellent important contributions of many researchers from around the globe including those of the author and his co workers a Gas Adsorption in Metal-Organic Frameworks T. Grant Glover, Bin Mu, 2018-09-03 This text discusses the synthesis characterization and application of metal organic frameworks MOFs for the purpose of adsorbing gases It provides details on the fundamentals of thermodynamics mass transfer and diffusion that are commonly required when evaluating MOF materials for gas separation and storage applications and includes a discussion of molecular simulation tools needed to examine gas adsorption in MOFs Additionally the work presents techniques that can be used to characterize MOFs after gas adsorption has occurred and provides guidance on the water stability of these materials Lastly applications of MOFs are considered with a discussion of how to measure the gas storage capacity of MOFs a discussion of how to screen MOFs for filtration applications and a discussion of the use of MOFs to perform industrial separations such as olefin paraffin separations Throughout the work fundamental information such as a discussion on the

calculation of MOF surface area and description of adsorption phenomena in packed beds is balanced with a discussion of the results from research literature Chitin and Chitosan Shameem Hasan,Veera M. Boddu,Dabir S. Viswanath,Tushar K. Ghosh,2022-08-27 This book reviews work that covers everything from basic chemistry to advanced applications Chitin and chitosan are used in a plethora of applications from wastewater treatment to prosthetics After introducing the subject of polysaccharides as a whole the authors turn to the preparation of chitin and chitosan and the characterization of the latter The book provides information on chitin chemistry extraction of chitin chitosan preparation processes and the applications of their derivatives in various fields Among the applications that are included in detail are the adsorption of heavy metals for pollution prevention and clean up biosensors cosmetics various medical applications from anti tumor activity to bone tissue engineering agriculture and food production and proton exchange membranes for fuel cells Chitin and Chitosan features information on molecular structure synthesis properties and latest research related to chitin and chitosan coverage of a wide range of topics from the properties of chitosan to its derivatives and applications in depth information on biomedical applications of chitin and chitosan and information that can be applied to other biopolymer processing engineering areas This book will be of interest to practitioners working in a wide variety of industries for which chitin and chitosan are useful materials researchers in biosensors and heavy metal adsorption and to academic researchers investigating the properties preparation and uses of these materials Models of Thermochemical Heat Storage Christoph Lehmann,Olaf Kolditz,Thomas Nagel,2018-01-23 Thermochemical gas solid reactions as well as adsorption processes are currently of significant interest for the design of heat storage systems This book provides detailed models of these reactions and processes that account for heat and mass transport chemical and physical reactions and possible local thermal non equilibrium The underlying scientific theory behind the models is explained laboratory tests are simulated and methods for high performance computing are discussed Applications ranging from seasonal domestic heat storage to diurnally operating systems in concentrating solar power facilities are considered in these models which are not available through any other sources Finally an outlook on future developments highlights emerging technologies **Characterization of Porous Solids VI** ,2002-11-14 This book contains 99 of the papers that were presented at the 6th in the series of Symposia on Characterization of Porous Solids held in Alicante Spain May 2002 Written by leading international specialists in the subject the contributions represent an up to date and authoritative account of recent developments around the world in the major methods used to characterize porous solids The book is a useful work of reference for anyone interested in characterizing porous solids such as MCM 41 mesoporous materials pillared clays etc Papers on pore structure determination using gas adsorption feature strongly together with papers on small angle scattering methods mercury porosimetry microcalorimetry scanning probe microscopies and image analysis Fundamentals of Gas Shale Reservoirs Reza Rezaee,2015-07-01 Provides comprehensive information about the key exploration development and optimization concepts required for gas shale
