dimensional collisions between bodies with each agent solution being considered as an object or body with mass After a collision of two moving bodies with specified masses and velocities these bodies again separate with new velocities This collision causes the agents to move toward better positions in the search space The main algorithm CBO is internally parameter independent setting it apart from previously developed meta heuristics This algorithm is enhanced ECBO for more efficient applications in the optimal design of structures The algorithms are implemented in standard computer programming languages MATLAB and C and two main codes are provided for ease of use **Applications of Metaheuristic**

Optimization Algorithms in Civil Engineering A. Kaveh, 2016-11-30 The book presents recently developed efficient metaheuristic optimization algorithms and their applications for solving various optimization problems in civil engineering The concepts can also be used for optimizing problems in mechanical and electrical engineering **Structural Design**
