Notes

¹Nodes are designated as "clinically detectable" if they can be palpated on physical exam and are confirmed melanoma by pathology following excision/biopsy.
²MSI comprise any satellite, locally recurrent, or in transit lesions.
³Clinical staging includes microstaging of the primary melanoma and clinical/pathologic evaluation for metastases. By convention it should be used after complete excision of the primary melanoma with clinical assessment for regional and distant metastases.
⁴Pathologic staging includes microstaging of the primary melanoma and pathologic information about the regional lymph nodes after partial or complete lymphadenectomy.
Pathologic Stage 0 and I patients are the exceptions; they do not necessarily require pathologic evaluation of their lymph nodes. Physicians should "discuss and consider" SLNB for patients with T1b Stage IA disease; physicians should "discuss and offer" SLNB for patients with Stage IB disease.
