Beyond Dispute The Invention Of Team Syntegrity:

Beyond Dispute Stafford Beer, 1994-09-20 Over the last forty years Stafford Beer has published a steady stream of books and papers in which he has applied cybernetic science to organizational problems In all of these he has explained underlying principles and developed new theories and recorded a great variety of practical applications He has now invented and demonstrated Team Syntegrity Syntegrity is a powerful invention in the organization of normative directional and strategic planning and other creative decision processes The underlying model is a regular icosahedron 20 sides This has 30 edges each of which represents a person An internal network of interactions is created by a set of protocols A group organized like this is an ultimate statement of participatory democracy since each role is indistinguishable from any other There is no hierarchy no top no bottom no sideways Beer illustrates how continued dynamic interaction between persons causes ideas and resolutions to hum around the sphere which reverberates into a kind of group consciousness Mathematical analysis of the structure shows how the process is determined by the even spread of synergy The aim of the book is to provide managers and their advisors with a new planning method that captures the native genius of the organization in a non political and non hierarchical way The book includes an enquiry into Beer s concept of recursive consciousness based on this model that is relevant to both neurocybernetics and the social systems sciences Service Systems Science Kyoichi

Kijima, 2014-11-13 The present volume illustrates a rich and promising research field in service service systems sciences by combining and fusing two strands of sciences the science of service systems and systems sciences of service The scale complexity and interdependence of today s service systems have been driven to an unprecedented level by globalization demographic changes and technology developments so that it is absolutely necessary now for us to cultivate a new frontier of service research In response service science has emerged during the past decade as a transdisciplinary research field that aims to clarify analyze and design the structure and process of service systems Service science is strongly motivated to prove the science of service systems To deal with complexity interactions and the network of in and among service systems we need to take a more systemic view Because systems sciences offers a way of thinking in relationships and interaction and theories and models to address complexity it is legitimate to develop systems sciences of service by explicitly focusing on systemic properties of service and service systems As a volume of the Translational Systems Sciences series this book emphasizes in particular a translational systems sciences perspective when the authors are approaching service service systems and service innovation Indeed the book employs systems sciences as a common framework or language not only to approach service in a holistic way but also to take a translational approach aiming to explain analyze design and support service systems and their evolution
