Linear Programming and Economic Analysis Robert Dorfman,Paul A. Samuelson,Robert M. Solow,2012-10-10 Designed primarily for economists and those interested in management economics who are not necessarily accomplished mathematicians this text offers a clear concise exposition of the relationship of linear programming to standard economic analysis The research and writing were supported by The

RAND Corporation in the late 1950s Linear programming has been one of the most important postwar developments in economic theory but until publication of the present volume no text offered a comprehensive treatment of the many facets of the relationship of linear programming to traditional economic theory This book was the first to provide a wide ranging survey of such important aspects of the topic as the interrelations between the celebrated von Neumann theory of games and linear programming and the relationship between game theory and the traditional economic theories of duopoly and bilateral monopoly Modern economists will especially appreciate the treatment of the connection between linear programming and modern welfare economics and the insights that linear programming gives into the determinateness of Walrasian equilibrium The book also offers an excellent introduction to the important Leontief theory of input output as well as extensive treatment of the problems of dynamic linear programming Successfully used for three decades in graduate economics courses this book stresses practical problems and specifies important concrete applications

Differential Topology Andrew H. Wallace, 2012-05-24 Keeping mathematical prerequisites to a minimum this undergraduate level text stimulates students intuitive understanding of topology while avoiding the more difficult subtleties and technicalities Its focus is the method of spherical modifications and the study of critical points of functions on manifolds No previous knowledge of topology is necessary for this text which offers introductory material regarding open and closed sets and continuous maps in the first chapter Succeeding chapters discuss the notions of differentiable manifolds and maps and explore one of the central topics of differential topology the theory of critical points of functions on a differentiable manifold Additional topics include an investigation of level manifolds corresponding to a given function and the concept of spherical modifications The text concludes with applications of previously discussed material to the classification problem of surfaces and guidance along with suggestions for further reading and study
