UNPACKING AND CHECK-OUT PROCEDURE

Before your instrument was shipped from the factory it was checked for accuracy. However, before placing your instrument into operation, as part of your checkout procedure, you should perform a successful accuracy/calibration check to assure yourself that the instrument's calibration settings are still properly adjusted. Record the results in the proper calibration log/record.

INTRODUCTION

The ALCO-SENSOR III is a pocket -sized breath alcohol testing device designed to read breath or estimate blood alcohol concentration (BAC). Nothing more than a disposable mouthpiece and a 9-volt alkaline battery are necessary to keep the ALCO-SENSOR operational.

With normal usage the unit should provide thousands of tests before the sensor needs replacing. The plug-in 9 volt ALKALINE battery should run 500 tests. Calibration is rapid and simple. An approved dry gas tank or a simulator may be utilized for calibration .

* Other types of batteries are not satisfactory.

EVIDENTIAL USE

When the ALCO-SENSOR III™ is used for evidential purposes, a limit of five positive test per hour should be observed. The fuel cell in the ALCO-SENSOR III will lose about 3% to 5% of its sensitivity when more than five "high" (above .100 samples are run in an hour). The cell will recover its full sensitivity in a matter of an hour after the last positive sample is run.

The ALCO-SENSOR III reading has three digits and a special fuel cell to enhance its performance. For precision work it should be calibrated with an approved standard.

If you are using the ALCO-SENSOR III for evidence, the waiting period between arrest and testing should conform to your local jurisdiction rulings, generally 15 to 20 minutes.

If the unit is being used for screening a 15 minute waiting period should be sufficient to rid the alimentary tract of any residual alcohol. Here again if regulations call for a minimum waiting period - observe it.

OPERATOR TRAINING

The results supplied by the calibrated ALCO-SENSOR III can be no better than the quality of the sample collected by the operator. Good sampling technique is essential to obtaining a deep lung sample, and a deep sample is essential to get a true breath alcohol reading.

AS SIMPLE AS THE ALCO-SENSOR III IS TO USE, TRAINING IN ITS USE IS RECOMMENDED.

There are several possible training resources. Often there are state organizations which train personnel in the use of the ALCO-SENSOR III. Example are: Health Departments; State Police; Municipal Police Academies; Junior College Systems, and others. Present users are frequently willing to assist new programs with advice and training. (References are available)

We have a VCR instructional tape which may be purchased. Personalized training programs can be arranged at your facility. Telephone inquiries regarding our services in this area are welcome.

INSTRUMENT CALIBRATION

Once a month calibration checks are recommended. If the reading is not within the required tolerance recalibrate the unit. **TO GET GOOD RESULTS, THE UNIT MUST BE IN CALIBRATION.**

ALCO-SENSOR III's generally hold their calibration for months. There are some circumstance which will cause sensitivity to drop and low readings to occur.

A recommended procedure for setting up a new program is to put the unit in place and check its calibration weekly for the first month. Reviewing these results should give you confidence in the stability of the calibration. If it holds calibration in your environment, set a policy of checking calibration monthly - otherwise, continue weekly checks.

PRINCIPLE OF OPERATION ALCOHOL IN THE BREATH

The accuracy of any Breath alcohol test is dependent upon the relationship between the concentrations of alcohol in the blood and deep lung breath. This ratio of 2:100 to 1 is well establish.

The amount of alcohol in a properly collected breath sample is governed by the amount of alcohol in the blood in the lungs. To get an accurate reading, a deep lung breath sample must be collected and analyzed.

A recent drink of an alcoholic beverage or regurgitation could introduce "mouth alcohol" to the breath, thus causing an exaggerated reading. A 15 minute waiting period prior to testing will insure the elimination of "mouth alcohol"

OPERATING CONDITIONS

The ALCO-SENSOR III is designed for optimal performance at temperatures between 20°C (68°F) to 36° (96°F). Temperature is important as the rate of the electro-chemical reaction is affected by temperature. The unit will operate at temperatures as low as 0°C, but the response is sluggish and some sensitivity is sacrificed.
