Better than Human Allen Buchanan, 2011-10-04 Is it right to use biomedical technologies to make us better than well or even perhaps better than human Should we view our biology as fixed or should we try to improve on it College students are already taking cognitive enhancement drugs The U S army is already working to develop drugs and technologies to produce super soldiers Scientists already know how to use genetic engineering techniques to enhance the strength and memories of mice and the application of such technologies to humans is on the horizon In *Better Than Human* philosopher bioethicist Allen Buchanan grapples with the ethical dilemmas of the biomedical enhancement revolution Biomedical enhancements can make us smarter have better memories be stronger quicker have more stamina live much longer avoid the frailties of aging and enjoy richer emotional lives In spite of the benefits that biomedical enhancements may bring many people instinctively reject them Some worry that we will lose something important our appreciation for what we have or what makes human beings distinctively valuable Others assume that biomedical enhancements will only be available to the rich with the result that social inequalities will worsen Buchanan shows that the debate over enhancement has been distorted by false assumptions and misleading rhetoric To think clearly about enhancement we have to acknowledge that human nature is a mixed bag and that our species has many design flaws We should be open be open to the possibility of becoming better than human while never underestimating the risks that our attempts to improve may back fire

Engineering Perfection Elyse Purcell, 2021-10-19 What do we owe our future children How do advances in biomedical science bear on these obligations How do capitalist incentives distort

their execution Advances in biotechnologies for human enhancement and designer babies appear to offer us new hope to control the fragility of human living Some philosophers have argued that we have a moral imperative to use them especially to eliminate disabilities Elyse Purcell offers an opposing view one guided by existential insights and Marxist reflections Engineering Perfection Solidarity Disability and Well being explores the effect global capitalism may have on the selection of traits for our future children and how the commercialization of these technologies may lead to the elimination of bodily diversity Although philosophers have addressed the possible widening between the haves and have nots this book considers the role oppression and exploitation may play in enhancing bodies for profit As a challenge to the global economy of debility Purcell proposes the Solidarity view which embraces human vulnerability and embodied difference By reflecting on facets of the human condition the Solidarity view challenges us to reject our conception of the good life as human perfection and instead reconceive of the good as one's self realization through the interdependent mutual recognition and co belonging with others

Human Nature in an Age of Biotechnology Tamar Sharon, 2013-10-11 New biotechnologies have propelled the question of what it means to be human or posthuman to the forefront of societal and scientific consideration This volume provides an accessible critical overview of the main approaches in the debate on posthumanism and argues that they do not adequately address the question of what it means to be human in an age of biotechnology Not because they belong to rival political camps but because they are grounded in a humanist ontology that presupposes a radical separation between human subjects and technological objects The volume offers a comprehensive mapping of posthumanist discourse divided into four broad approaches two humanist based approaches dystopic and liberal posthumanism and two non humanist approaches radical and methodological posthumanism The author compares and contrasts these models via an exploration of key issues from human enhancement to eugenics to new configurations of biopower questioning what role technology plays in defining the boundaries of the human the subject and nature for each Building on the contributions and limitations of radical and methodological posthumanism the author develops a novel perspective mediated posthumanism that brings together insights in the philosophy of technology the sociology of biomedicine and Michel Foucault's work on ethical subject constitution In this framework technology is neither a neutral tool nor a force that alienates humanity from itself but something that is always already part of the experience of being human and subjectivity is viewed as an emergent property that is constantly being shaped and transformed by its engagements with biotechnologies Mediated posthumanism becomes a tool for identifying novel ethical modes of human experience that are richer and more multifaceted than current posthumanist perspectives allow for The book will be essential reading for students and scholars working on ethics and technology philosophy of technology poststructuralism technology and the body and medical ethics

Our Grandchildren Redesigned Michael Bess, 2016-09-06 A panoramic overview of biotechnologies that can endlessly boost human capabilities and the drastic changes these superhuman traits could trigger Biotechnology is moving fast In the coming decades advanced

pharmaceuticals bioelectronics and genetic interventions will be used not only to heal the sick but to boost human physical and mental performance to unprecedented levels People will have access to pills that make them stronger and faster informatic devices will interface seamlessly with the human brain and epigenetic modification may allow people to reshape their own physical and mental identities at will Until recently such major technological watersheds like the development of metal tools or the industrialization of manufacturing came about incrementally over centuries or longer People and social systems had time to adapt they gradually developed new values norms and habits to accommodate the transformed material conditions But contemporary society is dangerously unprepared for the dramatic changes it is about to experience down this road on which it is already advancing at an accelerating pace The results will no doubt be mixed People will live longer healthier lives will fine tune their own thought processes and will generate staggeringly complex and subtle forms of knowledge and insight But these technologies also threaten to widen the rift between rich and poor to generate new forms of social and economic division and to force people to engage in constant cycles of upgrades and boosts merely to keep up Individuals who boost their traits beyond a certain threshold may acquire such extreme capabilities that they will no longer be recognized as unambiguously human In this important and timely book prize winning historian Michael Bess provides a clear nontechnical overview of cutting edge biotechnology and paints a vivid portrait of a near future society in which bioenhancement has become a part of everyday life He surveys the ethical questions raised by the enhancement enterprise and explores the space for human agency in dealing with the challenges that these technologies will present Headed your way over the coming decades new biotechnologies that can powerfully alter your body and mind The possibilities are tantalizing Rejuvenation therapies offering much longer lives 160 and even beyond in full vigor and mental acuity Cognitive enhancement through chemical or bioelectronic means the rough equivalent of doubling or tripling IQ scores Epigenetic tools for altering some of your genetically influenced traits at any point in your lifetime body shape athletic ability intelligence personality Bioelectronic devices for modulating your own brain processes including your pleasure centers a potentially non stop high Direct control of machines by thought and perhaps direct communication with other people brain to brain a new dimension of sharing and intimacy But some of the potential consequences are also alarming A growing rift between the biologically enhanced and those who can t afford such modifications A constant cycle of upgrades and boosts as the bar of normal rises ever higher Humans 95 Humans XP Humans 8 The fragmentation of humankind into rival bioenhancement clusters A gradually blurring boundary between person and product Extreme forms of self modification with some individuals no longer recognized as unambiguously human

Using Substances to Enhance Performance: A Psychology of Neuroenhancement Ralf Brand, 2017-01-18 Neuroenhancement NE is a behavior conceptualized as the use of a potentially psychoactive substance to enhance ones already proficient cognitive capacities Depending on the specific definitions used prevalence estimates vary greatly between very low 0.3% for illicit substances to astonishingly high 89% for freely available lifestyle substances These variations indicate that further research and more conceptual and theoretical clarification of the NE construct is dearly needed The contributions of this research topic aim to do just that Specific questions addressed are How prevalent is NE behavior How can NE research profit from the already more evolved field of social science research on doping in sports How is NE perceived by the public What psychological processes and variables play a role in the decision to neuroenhance A wide array of methodological approaches is used to investigate these questions The topics contributions range from theoretical to experimental accounts on NE and they utilize a diverse set of methods ranging from qualitative to neuroscientific approaches The research presented here represents a first step towards what we have labeled a psychological approach to NE By addressing the questions above this research topic hopefully advances our understanding of NE behavior As with every new field of research new answers always prompt new questions In light of what we know now about NE we hope that the findings presented here will be pursued by other researchers in the future Clearly the endeavor to understand NE behavior has only just begun

World Organization of Systems and Cybernetics 18. Congress-WOSC2021 Igor Perko, Raul Espejo, Vladimir Lepskiy, Dmitry A. Novikov, 2022-08-30 Important world institutions such as the United Nations UN the World Health Organization WHO the International Energy Agency IEA and the Organization for Economic Co operation and Development OECD have publicly recognizing the highly interconnected nature of our world and therefore the relevance of systemic thinking and cybernetics as leading knowledge foundations to deal with the complexity of economic social and environmental issues This recognition was the driving force of the Internet discussions held by participants to the World Organisation of Systems and Cybernetics 18th Congress which last September 27 to 29 WOSC 2021 More than ever we needed to debate and develop current ontological epistemological and methodological approaches to the understanding of the future of humanity WOSC organized this event in collaboration with the Russian Academy of Sciences RAS Scientists of this Academy together with scientists from all over the world made contributions to improving communications beyond particular nation states and regions toward the clarification of global issues like governance health education technology art and others Our aim in WOSC 2021 was bringing together scientists and researchers to collaborative debates at all levels from local communities to global societies At the end of the Congress scientists were invited to submit contributions to this Springer Nature book along the following four themes firstly

philosophical and methodological foundations for the development of the systems approach and cybernetics secondly the cybernetics of society ecology and governance thirdly digital technologies and physical realities merging into a hybrid reality and fourthly the transdisciplinarity of systems sciences and cybernetics applied to the further development of knowledge areas such as education embodiment of social policies and the arts About 25 contributions were accepted for publication in this book We see this as one of WOSC s important contribution to the scientific community around the world

Human Success Hugh Desmond, Grant Ramsey, 2023 What does it mean for our species or for any species to be successful Human Success Evolutionary Origins and Ethical Implications examines the concept of human success from a variety of disciplinary perspectives with contributions from leading paleobiologists anthropologists geologists philosophers of science and ethicists It tells the tale of how the human species grew in success linked metrics such as population size and geographical range and how it came to dominate ecological systems across the globe It explores how culture technology and creativity have contributed to human success However there is a darker side of human success as has become apparent in a world affected by climate change and the destruction of biodiversity This leads us to ask whether the human species can really be called successful and what our future success will look like in terms of our bodies minds morals and our place in the universe The essays in this book probe us to reflect on what has led to our apparent evolutionary success and most importantly what this success implies for the future of our species

A theory of the super soldier Jean-François Caron, 2018-05-02 Throughout history states have tried to create the perfect combatant with superhuman physical and cognitive features that are akin to those of comic book superheroes However the current innovations have nothing to do with the ones from the past and their development goes beyond a simple technological perspective On the contrary they are raising the prospect of a human enhancement revolution that will change the ways with which future wars will be fought and may even profoundly alter the foundations upon which our modern societies are built on This book which discusses the full ethical implications of these new technologies is a unique contribution for students and scholars who care about the morality of warfare
