The Bee Noah Wilson-Rich, Kelly Allin, Norman Carreck, Andrea Quigley, 2018-07-24. An incomparable illustrated look at the critical role bees play in the life of our planet. Bees pollinate more than 130 fruit, vegetable and seed crops that we rely on to survive. Bees are also crucial to the reproduction and diversity of flowering plants and the economic contributions of these irreplaceable insects measure in the tens of billions of dollars each year. Yet bees are dying at an alarming rate threatening food supplies and ecosystems around the world. In this richly illustrated natural history of the bee which includes more than 250 color photographs and illustrations, Noah Wilson Rich and his team of bee experts provide a window into the vitally important role that bees play in the life of our planet. Earth is home to more than 20,000 bee species from fluorescent colored orchid bees and sweat bees to flower nesting squash bees and leaf cutter bees. This book provides an unmatched account of this astounding diversity, blending an engaging narrative with practical hands on discussions of such topics as beekeeping and bee health. It explores our relationship with the bee over evolutionary time, examining how it originated and where it stands today and what the future holds for humanity and bees alike. Provides an accessible, richly illustrated look at the human bee relationship over time. Features a section on beekeeping and handy guides to identifying, treating and preventing honey bee diseases. Covers bee evolution, ecology, genetics and physiology. Includes a directory of notable bees. Presents a holistic approach to bee health including organic and integrated pest management techniques. Shows how you can help bee populations.

Pollinators and Pollination Jeff Ollerton, 2021-01-18. A unique and personal insight into the ecology and evolution of pollinators, their relationships with flowers and their conservation in a rapidly changing world. The pollination of flowers by insects, birds and other animals is a fundamentally important ecological function that supports both the natural world and human society. Without pollinators to facilitate the sexual reproduction of plants, the world would be a biologically poorer place in which to live; there would be an impact on food security and human health would suffer. Written by one of the world's leading pollination ecologists, this book provides an introduction to what pollinators are, how their interactions with flowers have evolved and the fundamental ecology of these relationships. It explores the pollination of wild and agricultural

plants in a variety of habitats and contexts including urban rural and agricultural environments The author also provides practical advice on how individuals and organisations can study and support pollinators As well as covering the natural history of pollinators and flowers the author discusses their cultural importance and the ways in which pollinator conservation has been portrayed from a political perspective The book draws on field work experiences in South America Africa Australia the Canary Islands and the UK For over 30 years the author has spent his career researching how plants and pollinators evolve relationships how these interactions function ecologically their importance for society and how we can conserve them in a rapidly changing world This book offers a unique and personal insight into the science of pollinators and pollination aimed at anyone who is interested in understanding these fascinating and crucial ecological interactions

Entomovectoring for Precision Biocontrol and Enhanced Pollination of Crops Guy Smagghe, Otto Boecking, Bettina Maccagnani, Marika Mänd, Peter G. Kevan, 2020-06-29 This book focuses on entomovectoring also known as apivectoring the method used for managing pollinators to increase crop yields and employ strategies of biocontrol in greenhouses and open fields It is written by experts working in academia and industry from the different continents of the world Over the past 25 years Research and Development has successfully investigated the potential of pollinators to perform two tasks dispersal of biological control agents BCOs and their pollination service This book provides a basic overview of the current literature on the different aspects and factors of this novel technology It explains and presents practical cases of enhancing pollination coupled with the suppression of plant pathogens and pests under various agricultural production practices from greenhouse to open field conditions and crops ranging from orchard fruits to small and tender berries vegetables and oil seeds The Ecology of Hedgerows and Field Margins John W. Dover, 2019-02-01 Hedges and field margins are important wildlife habitats and deliver a range of ecosystem services and their value is increasingly recognised by ecologists This book reviews and assesses the current state of research on hedgerows and associated field margins With the intensification of agriculture in the second half of the last century field sizes were increased by amalgamation and the rooting out of hedges synthetic pesticide and inorganic fertiliser use increased and traditional methods of hedge management were largely abandoned The book is split into two main sections The first deals with definitions current and historic management the impact of pesticides the decline in hedge stock and condition and new approaches to hedge evaluation using remote sensing techniques The second section explores the pollination and biological pest control benefits provided by hedges and field margins and examines the ecology of some of the major groups that are found in hedgerows and field margins butterflies and moths carabid beetles mammals and birds A case study on birds and invertebrates from a research farm managed as a commercial enterprise but which attempts to farm with wildlife in mind brings these themes together A final chapter introduces the neglected area of hedges in the urban environment The book will be of great interest to advanced students researchers and professionals in ecology agriculture wildlife conservation natural history landscape environmental and land management
