Education System Design Brian Hudson,Marilyn Leask,Sarah Younie,2020-11-26 This book highlights decisions governments have to make about their public education systems the options they have before them and the consequences of their decisions As well as covering issues such as values curriculum teacher training structures and so on the book addresses education planning for epidemics pandemics and disasters Education systems provide the foundations for the future wellbeing of every society yet existing systems are a point of global concern Education System Design is a response to debates in developing and developed countries about the characteristics of a high quality national education service It questions what makes a successful system of education With chapters that draw on experience in education systems around the world each one considers an element of a national education service and its role in providing a coherent and connected set of structures to ensure good education for all members of society Key topics include Existing education systems and what a future system might look like Inclusion and social justice Leadership and teacher education Policy options and the consequences of policy changes This book suggests an education system be viewed as an ecosystem with interdependencies between many different components needing to be considered when change is contemplated It is a vital book for any stakeholders in educational systems including students teachers and senior leaders It would be particularly useful to policy makers and those implementing policy changes **Educational Research for Social Justice** Alistair Ross,2021-06-22 This

book presents a series of analyses of educational policies largely in the UK but some also in Europe researched by a team of social scientists who share a commitment to social justice and equity in education We explore what social justice means in educational policy and practice and how it impacts on our understanding of both educational science and the public good Using a social constructivist approach the book argues that social justice requires a particular and critical analysis of the meaning of meritocracy and of the way this term turns educational policies towards treating learning as a competition in which many young people are constructed as losers We discuss how many terms in education are essentialised and have specific and different meanings for particular social groups and how this may create issues in both quantitative survey methods and in determining what is the public good We discuss social justice across a range of intersecting social characteristics including social class ethnicity and gender as they are applied across the educational policy spectrum from early years to postgraduate education We examine the ways that young people construct their identities and the implications of this for understanding the public good in educational practice We consider the responsibilities of educational researchers to acknowledge these issues and offer examples of researching with such a commitment We conclude by considering how educational policy might contribute to a socially just equitable and inclusive public good

The New Irish Studies Paige Reynolds, 2020-09-24 The New Irish Studies demonstrates how diverse critical approaches enable a richer understanding of contemporary Irish writing and culture The early decades of the twenty first century in Ireland and Northern Ireland have seen an astonishing rate of change one that reflects the common understanding of the contemporary as a moment of acceleration and flux This collection tracks how Irish writers have represented the peace and reconciliation process in Northern Ireland the consequences of the Celtic Tiger economic boom in the Republic the waning influence of Catholicism the increased authority of diverse voices and an altered relationship with Europe The essays acknowledge the distinctiveness of contemporary Irish literature reflecting a sense that the local can shed light on the global even as they reach beyond the limited tropes that have long identified Irish literature The collection suggests routes forward for Irish Studies and unsettles presumptions about what constitutes an Irish classic

Advancing Theory and Research in Widening Participation Ellen Boeren, Nalita James, 2019-10-23 Issues of access social exclusion and widening participation dominate educational policy agendas and are a shared global challenge Participation in higher education and adult lifelong learning activities can be a life changing experience that opens up new opportunities However access remains unequal People from lower socio economic backgrounds those living in the most deprived areas and people from minority ethnic groups are underrepresented In this book we focus on how we can move the field of widening participation forward paying specific attention to the theories and methods we can use to better understand and tackle the problem of underrepresented groups in post compulsory education and how individuals and institutions can be supported We argue that in order to make sense of these issues it is important to engage in both the findings of widening participation research and the theoretical foundations which underpin them This way

alternative perspectives on the widening participation agenda and emerging research and policy can be explored from alternative perspectives This book was originally published as a special issue of Studies in Continuing Education

Teaching Classics with Technology ,2019-06-13 The impact of ICT on the teaching of classical languages literature and culture has not until now been extensively described and evaluated Nevertheless educational technology has made a huge difference to the ways in which Classics is taught at junior senior and college level The book brings together twenty major approaches to the use of technology in the classroom and presents them for a wide international audience It thus forms a record of current and developing practice promotes further discussion and use among practitioners teachers learners and trainers and offers suggestions for changes in pedagogical practices in the teaching of Classics for the better The many examples of practice from both UK and US perspectives are applicable to countries throughout the world where Classics is being taught The more traditional curricula of high school education in the UK and Europe are drawing more and more on edutech whereas educational jurisdictions in the US are increasingly expecting high school students to use ICT in all lessons with some actively dissuading schools from using traditional printed textbooks This book presents school teachers with a vital resource as they adapt to this use of educational technology in Classics teaching This is no less pertinent at university level in the UK and US where pedagogy tends to follow traditionalist paradigms this book offers lecturers frameworks for understanding and assimilating the models of teaching and learning which are prevalent in schools and experienced by their students **The History of the University of Zambia, 1966-2016** B.
