Bushmeat And Livelihoods Wildlife Management And Poverty Reduction:

Bushmeat and Livelihoods Glyn Davies, David Brown, 2008-04-15 This book explores the links between bushmeat and livelihoods in Africa with a focus on the human dimension of the debate Assembles biological social and economic perspectives that illuminate the bushmeat debate Features a series of case studies that explore what species survive different intensities of bushmeat hunting and trapping Examines the shape and size of household bushmeat consumption and market trading Reviews governance and institutional impacts on wildlife management lessons learned from agriculture forest plant product and development sectors and perspectives from Asia and Latin America Provides an excellent resource for students and policy makers in wildlife management conservation and development

The harvest of wildlife for bushmeat and traditional medicine in East, South and Southeast Asia Tien Ming Lee, Amanda Sigouin, Miguel Pinedo-Vasquez, Robert Nasi, 2014-11-11 Bushmeat has always provided a source of nutrition and traditional medicine for local people throughout Asia this important resource is becoming increasingly under pressure due to loss of forest and overharvesting because of rising demand from growing human populations and trade legal and illegal For this reason the conservation of forests and sustainable use of wildlife are both imperative for improving rural livelihoods and poverty alleviation A comprehensive literature review yielded 236 papers relevant to this topic with the greatest number of papers discussing Southeast Asia 61% followed by South Asia 22% and East Asia 16% Potential solutions that emerged from the review include the use of measures of harvest to better gauge sustainable offtake levels protected areas and recovery zones improved governance and the implementation of co management partnerships Potential solutions for the traditional medicine trade include urban demand reduction campaigns introduction of synthetic alternatives increased efforts to reduce illegal trade and implementation of certification schemes for wildlife products In all of these cases a myriad of social implications such as the importance and spiritual significance of bushmeat in different cultures the preferences for bushmeat over farmed alternatives and the tradition of wildlife derived medicines must be considered Areas for further research include the study of climate change on bushmeat and food security the traditional medicine supply chain consumer reaction to synthetic alternatives the use of bushmeat particularly for medicinal purposes in urban societies and the negative effects of the growing wildlife trade on local livelihoods

Biodiversity Conservation and Poverty Alleviation Dilys Roe, Joanna Elliott, Chris Sandbrook, Matt Walpole, 2012-11-16 Biodiversity conservation and poverty alleviation are both important societal goals demanding increasing international attention While they may seem to be unrelated the international policy frameworks that guide action to address them make an explicit assumption that conserving biodiversity will help to tackle global poverty Part of the Conservation Science and Practice Series published with the Zoological Society of London this book explores the validity of that assumption The book addresses a number of critical questions Which aspects of biodiversity are of value to the poor Does the relationship between biodiversity and poverty differ according to particular ecological conditions How do different

conservation interventions vary in their poverty impacts How do distributional and institutional issues affect the poverty impacts of interventions How do broader issues such as climate change and the global economic system affect the biodiversity poverty relationship at different scales This volume will be of interest to policy makers practitioners and researchers concerned with understanding the potential and limitations of integrated approaches to biodiversity conservation and poverty alleviation

Hunting Wildlife in the Tropics and Subtropics Julia E. Fa,Stephan M. Funk,Robert

Nasi,2022-09-01 The hunting of wild animals for their meat has been a crucial activity in the evolution of humans It continues to be an essential source of food and a generator of income for millions of Indigenous and rural communities worldwide Conservationists rightly fear that excessive hunting of many animal species will cause their demise as has already happened throughout the Anthropocene Many species of large mammals and birds have been decimated or annihilated due to overhunting by humans If such pressures continue many other species will meet the same fate Equally if the use of wildlife resources is to continue by those who depend on it sustainable practices must be implemented These communities need to remain or become custodians of the wildlife resources within their lands for their own well being as well as for biodiversity in general This title is also available via Open Access on Cambridge Core

Antelope Conservation Jakob Bro-Jorgensen,David P. Mallon,2016-06-08 Antelopes constitute a fundamental part of ecosystems throughout Africa and Asia where they act as habitat architects dispersers of seeds and prey for large carnivores The fascination they hold in the human mind is evident from prehistoric rock paintings and ancient Egyptian art to today s wildlife documentaries and popularity in zoos In recent years however the spectacular herds of the past have been decimated or extirpated over wide areas in the wilds and urgent conservation action is needed to preserve this world heritage for generations to come As the first book dedicated to antelope conservation this volume sets out to diagnose the causes of the drastic declines in antelope biodiversity and on this basis identify the most effective points of action In doing so the book covers central issues in the current conservation debate especially related to the management of overexploitation habitat fragmentation disease transmission climate change populations genetics and reintroductions The contributions are authored by world leading experts in the field and the book is a useful resource to conservation scientists and practitioners researchers and students in related disciplines as well as interested lay people

Quantitative Studies in Green and Conservation Criminology Michael J. Lynch,Stephen F.

Pires,2019-07-17 During the early development and throughout the short history of green conservation criminology limited attention has been directed toward quantitative analyses of relevant environmental crime law and justice concerns While recognizing the importance of establishing a theory and terminology in the early stages of development this book redresses this imbalance The work features contributions that undertake empirical quantitative studies of green conservation crime and justice issues by both conservation and green criminologists The collection highlights the shared concerns of these groups within important forms of ecological crime and victimization and illustrates the ways in which these approaches can

be undertaken quantitatively. It includes quantitative conservation green criminological studies that represent the work of both well established scholars in these fields along with studies by scholars whose works are less well known and who are also contributing to shaping this area of research. The book presents a valuable contribution to the areas of Green and Conservation Criminology. It will appeal to academics and students working in these areas.

Wildlife Politics Bruce Rocheleau, 2017-03-30 Attitudes towards charismatic animals such as tigers lions bears and wolves vary greatly and change over time resulting in bitter political debates. This comprehensive book identifies and analyses the factors that influence policies across the globe highlighting how this impacts conservation as a whole. Issues such as overexploitation hunting ecotourism and the struggle to prevent illegal wildlife trafficking are examined and science's role in policymaking is assessed. The conflicting forces behind legislation including institutions interest groups and the media are analysed with particular focus on the significance of the Endangered Species Act covering over forty five species that have become matters of political debate in sixty seven different countries. Case studies and conceptual frameworks provide a clear understanding of the key topics shedding light on this important yet often overlooked area of environmental politics.

Biodiversity Monitoring and Conservation Ben Collen, Nathalie Pettorelli, Jonathan E. M. Baillie, Sarah M. Durant, 2013-02-14 As the impacts of anthropogenic activities increase in both magnitude and extent biodiversity is coming under increasing pressure. Scientists and policy makers are frequently hampered by a lack of information on biological systems particularly information relating to long term trends. Such information is crucial to developing an understanding as to how biodiversity may respond to global environmental change. Knowledge gaps make it very difficult to develop effective policies and legislation to reduce and reverse biodiversity loss. This book explores the gap between global commitments to biodiversity conservation and local action to track biodiversity change and implement conservation action. High profile international political commitments to improve biodiversity conservation such as the targets set by the Convention on Biological Diversity require innovative and rapid responses from both science and policy. This multi disciplinary perspective highlights barriers to conservation and offers novel solutions to evaluating trends in biodiversity at multiple scales.

Vital but vulnerable: climate change vulnerability and human use of wildlife in Africa's Albertine Rift, *Tropical Forest Conservation and Industry Partnership* Connie J. Clark, John R. Poulsen, 2012-04-23 Historically the conservation of forests and wildlife has focused on the creation of national parks and reserves. However only 9% of protected areas are larger than 14 000 hectares likely making them too small to conserve ecosystem services and prevent loss of wide ranging keystone species such as elephant and leopard. New approaches are needed that extend conservation beyond protected area boundaries into areas where economic considerations prevail. The book describes one such emerging model of conservation the integration of the private sector into partnerships to protect biodiversity and improve forest management. While such partnerships are being created in nearly every sector of resource extraction detailed analyses of how such partnerships work and whether they benefit

biodiversity conservation are rare Using a case study from the Congo Basin the book examines principles of conservation and partnership and provides technical and methodological details to replicate an innovative conservation model It presents concrete solutions for expanding conservation across multi use landscapes a necessary action as industry expands to all the corners of the globe
