Abstract Musical Intervals Ming Tsao, 2007 This book is an introduction to GIS Generalized Interval Systems theory that includes the major results of pitch class theory It provides mathematicians with applications of group theory to music and music theorists with the essential connections between GIS theory and pitch class theory Many of the results in pitch class theory are not addressed by David Lewin such as power functions or the Common Tone Theorem for inversions The book states those results and generalizes them to conform with GIS theory Finally it addresses recent criticisms leveled at pitch class theory and suggests how they can be addressed in GIS theory     Mathematics and Computation in Music Octavio A.

**Graph Theoretical Models of Abstract Musical Transformation** Jeffrey Johnson,1997-08-21 An introduction to a new way of modeling musical surfaces for theorists and for generating precompositional relationships for composers this unique music theory reference work introduces classifies and enumerates graph theoretical models for musical transformations in compositional and analytical applications It also provides a practical application of musical applications for students of graph theory and could serve as an introduction to the further cross integration of these two disciplines Of interest to scholars advanced music theory students and composers this work endeavors to facilitate the expression and understanding of musical ideas by presenting an unexplored way of notating relationships between transformational objects that is not attached to specific compositional or analytical systems Graph theoretical models of abstract musical transformations supplement and refine the ability to articulate orderings with pitch structures in analytical environments An extended analysis of the opening section of Form IV Broken Sequences by Stefan Wolpe is used as a demonstration The use of these diagrams to generate compositional surfaces differs slightly from their use

in analysis an analytical model relates to a single musical surface whereas compositional applications can be used to generate any potential surface derived from construction of the graphs
