A Theory Of Computer Semiotics A Theory Of Computer Semiotics:

A Theory of Computer Semiotics Peter Bøgh Andersen, 1997-04-28 Semiotics is the science of signs graphical such as pictures verbal writing or sounds or others such as body gestures and clothes Computer semiotics studies the special nature of computer based signs and how they function in use This 1991 book is based on ten years of empirical research on computer usage in work situations and contains material from a course taught by the author It introduces basic traditional semiotic concepts and adapts them so that they become useful for analysing and designing computer systems in their symbolic context of work It presents a novel approach to the subject rich in examples in that it is both theoretically systematic and practical The author refers to and reinterprets techniques already used so that readers can deepen their understanding In addition it offers new techniques and a consistent perspective on computer systems that is particularly appropriate for new hardware and software e g hypermedia whose main functions are presentation and communication This is a highly important work whose influence will be wide and longlasting

The Computer as Medium Berit Holmqvist, 1993 Many industrial training applications educational applications and of course information applications such as databases and hypermedia are all attempts to communicate and yet we really don't know much about the computer as a communicative medium Bringing together a collection of essays presenting such diverse theoretical approaches as general semiotics linguistics communication theory literary and art criticism sociology and history the editors set out to establish and elaborate the role of computer systems as a sign technology The volume is divided into three main parts each focused on a different field of semiotic inquiry Computer Based Signs discusses the special nature of signs produced by means of computers The Rhetoric of Interactive Media deals with codes of aesthetics and composition for the new elastic medium of communication interactive fiction and hypertext Computers in Context analyzes computer technology in the larger cultural historical and organizational contexts Scholars in computer science cognitive science organization theory information and media science semiotics communication and linguistics will find this book invaluable and as current excitement about hypermedia and electronic books continues to grow a broader audience including computer artists and literary critics will also find it a useful resource

The Semiotic Engineering of Human-computer Interaction Clarisse Sieckenius De Souza,2005 A theory of HCI that uses concepts from semiotics and computer science to focus on the communication between designers and users during interaction In *The Semiotic Engineering of Human Computer Interaction* Clarisse Sieckenius de Souza proposes an account of HCI that draws on concepts from semiotics and computer science to investigate the relationship between user and designer Semiotics is the study of signs and the essence of semiotic engineering is the communication between designers and users at interaction time designers must somehow be present in the interface to tell users how to use the signs that make up a system or program This approach which builds on but goes further than the currently dominant user centered approach allows designers to communicate their overall vision and therefore helps users understand designs rather than simply which icon to click According to de Souza s account both designers and users are interlocutors in an overall communication process that takes place through an interface of words graphics and behavior Designers must tell users what they mean by the artifact they have created and users must understand and respond to what they are being told By coupling semiotic theory and engineering de Souza s approach to HCI design encompasses the principles the materials the processes and the possibilities for producing meaningful interactive computer system discourse and achieves a broader perspective than cognitive ethnographic or ergonomic approaches De Souza begins with a theoretical overview and detailed exposition of the semiotic engineering account of HCI She then shows how this approach can be applied specifically to HCI evaluation and design of online help systems customization and end user programming and multiuser applications Finally she reflects on the potential and opportunities for research in semiotic engineering

Semiotica ,1999 *Semiotics And Information Sciences* Paul Perron,2000-12 Very little has been done to show the explicit connection between the representation and the study of information despite the obvious relation that exists between them The purpose of the conference held at Victoria College at the University of Toronto in October 1998 titled *Semiotics and the Information Sciences* was precisely to focus attention on this pivotal nexus especially given that we now live in a so called information age where it is becoming increasingly more difficult to distinguish between information itself and its interpretation The invited papers appearing in this volume given by experts in semiotics and the information sciences that were designed to investigate this relation by analysis explication and illustration contain significant implications for studying information in the future

Linguistics and Language Behavior Abstracts ,1998 *Threshold Concepts Within the Disciplines* Ray Land,Jan Meyer,Jan Smith,2008 *Threshold Concepts within the Disciplines* brings together leading writers from various disciplines and national contexts in an important and readable volume for all those concerned with teaching and learning in higher education The foundational principle of threshold concepts is that there are in each discipline conceptual gateways or portals that must

be negotiated to arrive at important new understandings In crossing the portal transformation occurs both in knowledge and subjectivity Such transformation involves troublesome knowledge a key concern for contributors to this book who identify threshold concepts in their own fields and suggest how to deal with them Part One extends and enhances the threshold concept framework containing chapters that articulate its qualities its links to other social theories of learning and other traditions in educational research Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including computing engineering biology design modern languages education and economics In the many empirical case studies educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts Other chapters emphasise the equally important being and becoming dimension of learning Part Three suggests pedagogic directions for those at the centre of the education project with contributions focusing on the socialisation of academics and their continuing quest to be effective teachers The book will be of interest to disciplinary teachers educational researchers and educational developers It also is of relevance to issues in quality assurance and professional accreditation
