Nonlinear Analysis, Geometry and Applications Diaraf Seck, Kinvi Kangni, Philibert Nang, Marie Salomon Sambou, 2020-11-20 This book gathers nineteen papers presented at the first NLAGA BIRS Symposium which was held at the Cheikh Anta Diop University in Dakar Senegal on June 24 28 2019 The four day symposium brought together African experts on nonlinear analysis and geometry and their applications as well as their international partners to present and discuss mathematical results in various areas The main goal of the NLAGA project is to advance and consolidate the development of these mathematical fields in West and Central Africa with a focus on solving real world problems such as coastal erosion pollution and urban network and population dynamics problems The book addresses a range of topics related to partial differential equations geometrical analysis of optimal shapes geometric structures optimization and optimal transportation control theory and mathematical modeling **The Mathematics of Soap Films: Explorations with Maple** John Oprea, 2000 Nature tries to minimize the surface area of a soap film through the action of surface tension The process can be understood mathematically by using differential geometry complex analysis and the calculus of variations This book employs ingredients from each of these subjects to tell the mathematical story of soap films The text is fully self contained bringing together a mixture of types of mathematics along with a bit of the physics that underlies the subject The development is primarily from first principles requiring no advanced background material from either mathematics or physics Through the Maple applications the reader is given tools for creating the shapes that are being studied Thus you can see a fluid rising up an inclined plane create minimal surfaces from complex variables data and investigate the true shape of a balloon Oprea also includes descriptions of experiments and photographs that let you see real soap films on wire frames The theory of minimal surfaces is a beautiful subject which naturally introduces the reader to fascinating yet accessible topics in mathematics Oprea s presentation is rich with examples explanations and applications It would make an excellent text for a senior seminar

or for independent study by upper division mathematics or science majors **CRC Concise Encyclopedia of Mathematics**
