Learning and Expanding with Activity Theory Anna Lisa Sannino, Annalisa Sannino, Harry Daniels, Kris D. Gutiérrez, 2009-08-17 This book is a collection about cultural historical activity theory as it has been developed and applied by Yrjö Engeström. The work of Engeström is both rooted in the legacy of Vygotsky and Leontiev and focuses on current research concerns that are related to learning and development in work practices. His publications cross various disciplines and develop intermediate theoretical tools to deal with empirical questions. In this volume Engeström's work is used as a springboard to reflect on the question of the use, appropriation and further development of the classic heritage within activity theory. The book is structured as a discussion among senior scholars including Yrjö Engeström himself. The work of the authors pushes on classical activity theory to address pressing issues and critical contradictions in local practices and larger social systems. NASA Technical Note, 1973 Environmental and Financial Performance Evaluation in 3D Printing Using MFCA and LCA Tiago Yuiti Kamiya, Marcell Mariano Corrêa Maceno, Mariana Kleina, 2021-03-29 This book presents the methodology of environmental and financial performance evaluation in 3D printing processes using the MFCA and LCA. This methodology is divided into 7 main steps which are: a) identification of the analysis problem for example comparison of different types of 3D printer for use in a given purpose; b) comparison of different printing materials for the same 3D printer technology among others; c) definition of printing parameters; d) definition of the product to be printed; e) preparation of the printing process flow diagram; f) definition or measurement of the lifespan of the printed product; g) data collection for the implementation of the LCA tool for example mass and energy balances; h) data collection for the implementation of the MFCA tool for example mass balances, energy balances, mass costs, energy costs, labor costs, etc.; and i) comparative assessment of the financial and environmental performance of 3D printing. As a way of exemplifying the application of this methodology, a real case is presented involving the comparison of two types of materials: Polylactic Acid (PLA) and Polyethylene Glycol Polyterephthalate (PETG) used in the 3D printing process by FDM technology. The part printed in this real case was a clearance gauge used as a joint spacing control by an automobile industry located in Brazil. The development of the methodology and consequent application has shown that it can be used by users of 3D printing in the most diverse areas to support their decision in choices that can present the best performance both financial and environmental. *2018 CFR Annual Print Title 24 Housing and Urban Development Parts 700 to 1699* Office of The Federal Register, 2018-04-01 **2018 CFR Annual Print Title 24 Housing and Urban Development Parts 0 to 199** Office of The Federal Register, 2018-04-01 **Introduction to Vygotsky** Harry Daniels, 2017-04-26 This thoroughly updated third edition provides students with an accessible overview of Vygotsky's work combining reprints of key journal and text articles with rich editorial commentary.
