Astronomy's Limitless Journey Günther Hasinger, 2015-10-31 When observing the sky on a very clear dark night the soft glow of the Milky Way with its thousands of stars can be seen with the naked eye Over the centuries since Galileo Galilei first pointed a telescope at the galaxy in 1609 this awe inspiring yet easily visible panorama was our cosmos our celestial world With each new scientific discovery however this cosmos has grown dramatically increasing rapidly over the last several decades As we look deeper into space the earlier phases of the cosmos are unveiled to us but we know that even with the largest telescopes we will see only a tiny fraction of the vast expanse of the universe In Astronomy's Limitless Journey astrophysicist Günther Hasinger takes the reader on a journey to the far reaches of the universe an exciting time travel that begins with the incredibly hot fireball of the Big Bang roughly 13.8 billion years ago and ends in distant eons with its cold dark demise In between lie the times in which extensive structures galaxies stars and planets form As the field of astrophysics and cosmology experiences a golden age due to larger telescopes faster computers and more sophisticated algorithms fundamental changes are taking place in our understanding of space and time and of the origin and future of our universe Hasinger thoroughly explains these fascinating revelations and describes the methods utilized in modern astrophysics He cautions however that the boundaries between knowledge and ignorance shift constantly where our knowledge is so incomplete such that we can only speculate the journey becomes shaky Indeed every new discovery opens a further door to the unknown and with every answered question we discover more locked doors still to be opened
