Herpetological Osteopathology Bruce M. Rothschild, Hans-Peter Schultze, Rodrigo Pellegrini, 2012-01-05 As scientific analysis of testable hypotheses has replaced the speculative approach to study of bone disease in recent and fossil amphibians and reptiles the field has advanced from simply reporting observations to analyzing their implications This process is predicated upon a reproducible data base which explains diagnoses the nature of bony alterations and a secure review of the literature Thereby hangs the rub The herpetological literature are difficult to access let alone read and are scattered through many prominent and eclectic journals and in the lay literature While older diagnoses often have not stood the test of time the clarity of report descriptions usually allows confident identification of the underlying pathology **The**

Notochord P. Eckhard Witten, Brian K. Hall, 2022-05-09 Although it is the defining organ of the Chordata the notochord and its cells are one of the least understood vertebrate organs This may be because large parts of the notochord are often replaced with cartilaginous or bony vertebral bodies The presence of cartilage in the notochord raises questions about the evolutionary relationships between notochord cells and cartilage cells This book integrates classical analytical studies with recent palaeontological experimental and molecular studies in both developmental and evolutionary contexts For example although the early signaling function of the notochord is conserved across the vertebrates many will be surprised to find that the role of the notochord in vertebral body development in tetrapods is not the blueprint for all vertebrates Recent studies on zebrafish and medaka embryos have uncovered the molecular mechanisms of a somite independent notochord driven segmentation process that establishes vertebral centra and intervertebral spaces As this process is not restricted to teleosts the authors have written a general discussion about the role of the notochord in vertebral formation Modularity and segmentation of the vertebral column are related topics Further overarching themes are the structure function and fate of the notochord in adult vertebrates and notochord cartilage relationships Key Features The first book devoted to notochord development function and evolution Includes and integrates information on the notochord from studies going back 169 years Integrates developmental molecular functional experimental and palaeontological studies Documents the fate of the notochord across the vertebrates Extensively illustrated with classical and new images Related Titles Bard J Evolution The Origins and Mechanisms of Diversity ISBN 978 0 3673 5701 6 Leys S and Hejnol A Origin and Evolution of Metazoan Cell Types ISBN 978 1 1380 3269 9 *Vertebrate Skeletal Histology and Paleohistology* Vivian de Buffrénil, Armand J. de Ricqlès, Louise Zylberberg, Kevin Padian, 2021-06-24 *Vertebrate Skeletal Histology and Paleohistology* summarizes decades of research into the biology and biological meaning of hard tissues in both living and extinct vertebrates In addition to outlining anatomical diversity it provides fundamental phylogenetic and evolutionary contexts for interpretation An international team of leading authorities review the impact of ontogeny mechanics and environment in relation to bone and dental tissues Synthesizing current advances in the biological problems of growth metabolism evolution ecology and behavior this

Evolving Neural Crest Cells Brian Frank Eames, Daniel Meulemans Medeiros, Igor Adameyko, 2020-07-28 Vertebrates possess lineage specific characteristics These include paired anterior sense organs and a robust modular head skeleton built of cellular cartilage and bone All of these structures are derived at least partly from an embryonic tissue unique vertebrates the neural crest The evolutionary history of the neural crest and neural crest cells has been difficult to reconstruct This volume will use a comparative approach to survey the development of the neural crest in vertebrates and neural crest like cells across the metazoa This information will be used to reveal neural crest evolution and identify the genomic genetic and gene regulatory changes that drove them Key selling features Summarizes the data regarding neural crest cells and neural crest derivatives Uses a broad based comparative approach Suggests hypothesis that the origin of neural crest cells involved the novel co activation of ancient metazoan gene programs in neural border cells Illustrates how the emergences of neural crest made possible the diversification of vertebrate heads
