

The screenshot displays the Atmel Studio IDE interface. The 'Build' menu is open, showing options like 'Build Solution', 'Rebuild Solution', 'Clean Solution', and 'Compile'. The 'Compile' option is highlighted. The main editor window shows the source code for 'GccApplication3.c', which includes a header file and a main function. The code uses the 'avr/io.h' header and defines a 'main' function that toggles a pin (PORTB) with a 100ms delay. The Solution Explorer on the right shows the project structure, including 'GccApplication3' and its sub-items. The Output window at the bottom shows the compilation process, including the compiler path, the source file being compiled, and the successful completion of the build.
