Holism and Reductionism in Biology and Ecology Rick C. Looijen, 2012-12-06 Holism and reductionism are traditionally seen as incompatible views or approaches to nature Here Looijen argues that they should rather be seen as mutually dependent and hence co operating research programmes He sheds some interesting new light on the emergence thesis its relation to the reduction thesis and on the role and status of functional explanations in biology He discusses several examples of reduction in both biology and ecology showing the mutual dependence of holistic and reductionist research programmes Ecologists are offered separate chapters clarifying some major yet highly and controversial ecological concepts such as community habitat and niche The book is the first in depth study of the philosophy of ecology Readership Specialists in the philosophy of science especially the philosophy of biology biologists and ecologists interested in the philosophy of their discipline Also of interest to other scientists concerned with the holism reductionism issue **The Evolution of Designs**

Philip Steadman, 2008-06-03 The Evolution of Designs tells the history of the many analogies that have been made since the end of the eighteenth century between the evolution of organisms and the human production of artefacts especially buildings

Vega, 2023-04-11 How functional medicine leverages systems biology and epigenetic science to treat the microbiome and reverse chronic disease Each body is a system within a system an ecology within the larger context of

social political economic cultural and environmental factors This is one of the lessons of epigenetics whereby structural inequalities are literally encoded in our genes But our ecological embeddedness extends beyond DNA for each body also teems with trillions of bacteria yeast and fungi all of them imprints of our individual milieus Nested Ecologies asks what it would mean to take seriously our microbial being given that our internal ecologies are shaped by inequalities embedded in our physical and social environments Further Rosalynn Vega argues that health practices focused on patients unique biology inadvertently reiterate systemic inequities In particular functional medicine which attempts to heal chronic disease by leveraging epigenetic science and treating individual microbiomes reduces illness to problems of lifestyle principally diet while neglecting the inability of poor people to access nutrition Functional medicine thus undermines its own critique of the economics of health care Drawing on novel digital ethnographies and reflecting on her own experience of chronic illness Vega challenges us to rethink not only the determinants of well being but also what it is to be human **Nutrition and Diet**

Empiricism and Darwin's Science F. Wilson, 2012-12-06 I would like to record my thanks to Paul Thompson for useful conversations over the years and also to several generations of students who have helped me develop my ideas on biological theory and on Darwin My wife has as usual been more than helpful in particular she typed a good portion of the manuscript while I was on leave a few years ago more now than I like to remember My parents were both looking forward to holding a final copy of this book I only regret that my mother did not live long enough to see its completion I must also thank the publishers and their staff They have been remarkably patient about meeting deadlines promises were repeatedly made and then owing to family situations had to be broken and for this I am considerably in their debt I would further like to thank the following authors and publishers for permission to use their work R C Lewontin The Genetic Basis of Evolutionary Change Figure 1 p 14 1964 Columbia University Press reprinted here by kind permission of the author and publisher F Wilson Goudge s Contribution to the Philosophy of Science in L W Sumner J G Slater and F Wilson eds Pragmatism and Purpose Essays in Honour of T A Goudge 1964 University of Toronto Press reproduced here in part by kind permission of all the editors and the publisher **Essentials of Biology** Holt Rinehart & Winston, 1998 How Life Moves Caryn

The Problem of Free Will and Naturalism Christian Onof, 2024-02-22

The problem of free will is one of the oldest and most central philosophical conundrums. The contemporary debate around it has produced a range of sophisticated proposals but shows no sign of leading to convergence. Christian Onof reviews these contemporary approaches and argues that their main shortcomings are ultimately due to paradoxical requirements on free will imposed by the naturalistic framework. Onof singles out Kant's critical solution as one that stands out among historical approaches insofar as it is based upon a rejection of this framework. By using the same methodological tool that he applies to contemporary proposals—namely a distinction between a volitional account of how we control our actions, a psychological account of the reasons for it, and a metaphysical account of our status as agent—Onof shows that Kant's solution constitutes a coherent picture of free will. By exhibiting the structure running through several key publications of Kant's critical period and drawing upon unpublished notes, Onof addresses several debates which loom large in contemporary Kant literature. His exegetical work puts Kant's theory into conversation with contemporary analytic theories of free will and leads to defining a Kantian position that overcomes the issues plaguing existing approaches to the problem of free will.
