

Transport in Plants

The phloem transports dissolved sugars to the rest of the plant from the leaves.

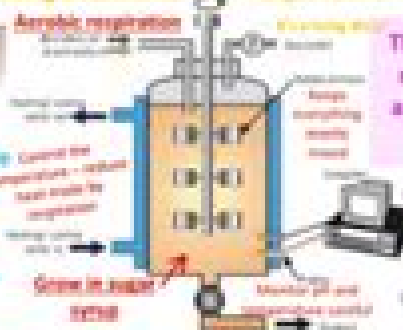

The xylem transports water and minerals up the plant from roots to leaves.

Water moves from the roots to the leaves, up the xylem via the **TRANSPIRATION STREAM**.

Plants also have a large surface area (provided by root hair cells) so they absorb most of the water and minerals a plant will need.

Sustainable Food
"producing food in a way that can continue for many years"

Using a fermenter:

The way we use the earth's resources can have long and short term effects on the environment.

But we can be better contributors about the environment should be checked to ensure it is a valid idea before carrying out research. It is important to have experiments set up to check the results. This is much easier said than done.

to ensure we are not contributing to an impact.

Energy lost as movement
Energy lost as heat

Intensive Farming:
Stop animals from by feeding movement. Stop in good movement and keeping animals. Watch (keeping them in) is this actually OK?

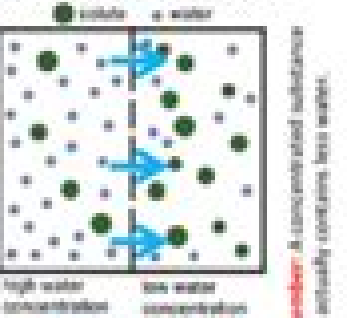

Adaptations for exchange in the intestines (absorbing your food)

Energy Drinks - For when your DEHYDRATED
Contain: Water, sugar and mineral ions.
Water - to rehydrate
Sugar - for energy
Minerals - to replace those lost during sweating.

Osmosis
WATER diffusing from where it is a lot of it to where there is less of it.

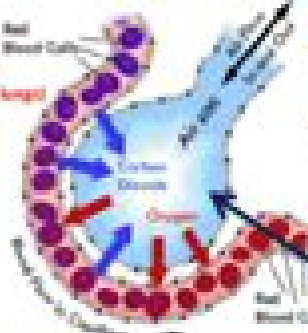

Biology Unit 3

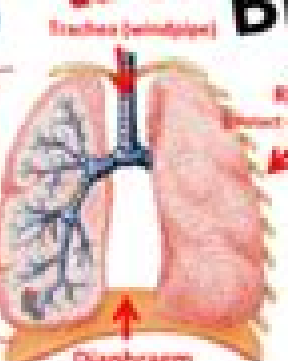

Adaptations for gaseous exchange (in your lungs)

- Large surface area
- Short diffusion pathway
- Steep concentration gradient.
Remember: a substance will move from where there's a lot to where there's a little.
This is helped with **good blood supply** and **breathing** (so lots of oxygen moving in and out).

Alveoli - Air sacs in the Lungs! You have loads of these wrapped in capillaries.

Lungs

Breathing in (inhalation)

Diaphragm contracts flattens
Intercostal muscles (muscles around the ribs) contract - moving ribs up and out
Volume of lungs increases - air moves in

Breathing in (exhalation)

Diaphragm relaxes coming up
Intercostal muscles (muscles around the ribs) relax - moving ribs down and in
Volume of lungs decreases - air moves out

Active Transport

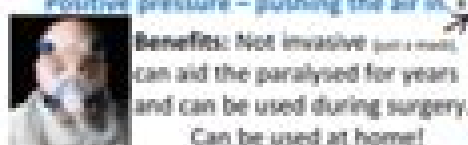

This is when some thing moves against the concentration gradient.
Low to High!

It needs energy to happen! But means ions can be absorbed from soil and sugars and salts can move into cells.

Artificial breathing

Positive pressure - pushing the air in.

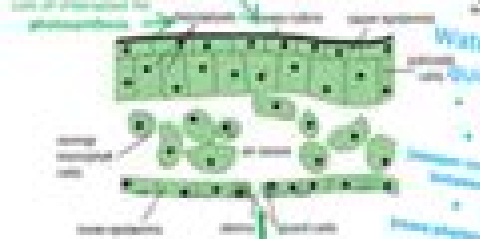

Negative pressure - a vacuum is created outside the body moving the chest up and causing air to be drawn in.

The Iron Lung

Waxy cuticle - water and gas proof
Stops too much water loss.

Water is lost more quickly when it's windy or its hot.

Leaves are thin and flat giving them a large surface area for diffusion of gases (O₂ in and oxygen out). Guard cells around stomata can open and close to let CO₂ in but stop too much water being lost!

Transpiration
Water loss from the leaves is called TRANSPIRATION
