Abstract—The purpose of this study was to determine the effect of a 10-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in the city of Bursa, Turkey. The study group consisted of 20 children (10 boys and 10 girls) who were randomly selected from the 10-year-old children in the school. The children were divided into two groups: a control group and an experimental group. The control group did not participate in any physical education program, while the experimental group participated in a 10-week training program. The physical fitness of the children was measured at the beginning and at the end of the 10-week period. The measurements included heart rate, blood pressure, and body mass index. The results of the study showed that the experimental group had significantly higher heart rates and blood pressures at the end of the 10-week period compared to the control group. The body mass index of the children in both groups did not change significantly. The results of this study suggest that a 10-week training program can improve the physical fitness of 10-year-old children.

Abstract: Managing a team is a complex task involving the coordination of individuals, resources, and information. This research explores the factors that influence team performance and identifies strategies for improving team effectiveness. The study involves a series of experiments and surveys, examining the impact of team structure, communication, and leadership on team outcomes. The results suggest that effective team management requires a combination of structural, communication, and leadership interventions. The findings have implications for organizational practice, providing insights into how to design and manage teams for optimal performance.
