Biomolecular Nmr Spectroscopy:

Biomolecular NMR Spectroscopy Andrew J. Dingley, A. J. Dingley, Steven M. Pascal, 2011 Nuclear Magnetic Resonance NMR spectroscopy is the most powerful technique for characterisation of biomolecular structures at atomic resolution in the solution state This timely book entitled Biomolecular NMR Spectroscopy focuses on the latest state of the art NMR techniques for characterisation of biological macromolecules in the solid and solution state The editors Dr Andrew Dingley University of Auckland New Zealand and Dr Steven Pascal Massey University New Zealand have organised the book into four sections covering the following topics i sample preparation ii structure and dynamics of proteins iii structure and dynamics of nucleic acids and protein nucleic acid complexes and iv rapid and hybrid techniques including the latest advances in NMR data acquisition and structural analysis and approaches that combine NMR data with data from complementary physical techniques The book will be a valuable resource for experienced scientists in academia government and public services and in industry It will also be suitable for newcomers and graduate students entering the field of biomolecular NMR spectroscopy

Biomolecular NMR Spectroscopy Jeremy N. S. Evans, 1995 The technique of nuclear magnetic resonance NMR spectroscopy is an important tool in biochemistry and biophysics for the understanding of the structure and ultimately the function of biomolecules This textbook explains the salient features of biological NMR spectroscopy to undergraduates and postgraduates taking courses in NMR biological NMR physical biochemistry and biophysics Unlike other books in the general field of NMR except the advanced treatises the approach here is to introduce and make use of quantum mechanical product operators as well as the classical vector method of explaining the bewildering array of pulse sequences available today The book covers two dimensional three dimensional and four dimensional NMR and their application to protein and DNA structure determination A unique feature is the coverage of the biological aspects of solid state NMR spectroscopy The author provides many selected examples from the research literature illustrating the applications of NMR spectroscopy to biological proteins

Recent Developments in Biomolecular NMR Marius Clore, Jennifer Potts, 2012-08-21 NMR spectroscopy is widely used in biomolecular science particularly for structure determination of proteins nucleic acids and carbohydrates Much of the innovation within NMR spectroscopy has been within the field of protein NMR spectroscopy an important technique in structural biology Filling a gap in the literature this book draws together experts in the field to discuss the real advances in NMR methods that have occurred or have an impact on the biomolecular field in the last few years The coverage includes recent developments in using NMR for determination of protein structures membrane proteins the dynamics of RNA and advances in NMR in drug discovery Edited by leading biological NMR spectroscopists the book is essential reference for researchers in industry and academia interested in or joining this bioanalytical field

Atreya, 2012-10-18 NMR spectroscopy has undergone a revolution in recent years with the advent of several new methods overcoming the problems of sensitivity and resolution Recent developments in biotechnology have made it easier and economical to introduce ^{13}C , ^{15}N and ^2H into proteins and nucleic acids At the same time there has been an explosion in the number of NMR experiments that utilize such isotope labeled samples Thus a combination of isotopic labeling and multidimensional multinuclear NMR has opened up new avenues for structural studies of proteins nucleic acids and their complexes This book will focus on recent developments in isotope labeling methods for structural studies of small molecules peptides proteins and nucleic acids The aim of the book is to serve as a compendium of isotope labeling for the biomolecular NMR community providing comprehensive coverage of the existing methods and latest developments along with protocols and practical hints on the various experimental aspects The book will cover a wide range of topics in isotope labeling under one title including emerging areas of metabolonomics and solid state NMR *New Methods for Biomolecular NMR Spectroscopy and Applications in Structural Biology* Xinying Jia, 2010 This thesis consists of a number of projects that extend the application of nuclear magnetic resonance NMR research in structural biology and demonstrate the potential of NMR combined with other techniques to answer specific questions

Paramagnetism in Experimental Biomolecular NMR Claudio Luchinat, Giacomo Parigi, Enrico Ravera, 2018-08-03 Paramagnetic NMR is a growing technique that represents an increasingly important tool for the investigation of biomolecules This book presents an update and overview of the paramagnetic NMR phenomena and effects as well as guidelines for practical implementation of state of the art experiments All experiments are supported by a solid theoretical foundation Areas mentioned are the development of solid state NMR the use of paramagnetic tags providing information on the structure and mobility of the investigated systems and dynamic nuclear polarization to increase sensitivity Compiled by experts in the field this book has international appeal for researchers as well as students interested in magnetic resonance and structural biology who require experimental support and accessible information **Structure Computation and Dynamics in Protein NMR** N. Rama Krishna, Lawrence Berliner, 1999-06-30 Volume 17 is the second in a special topic series devoted to modern techniques in protein NMR under the Biological Magnetic Resonance series Volume 16 with the subtitle Modern Techniques in Protein NMR is the first in this series These two volumes present some of the recent significant advances in the biomolecular NMR field with emphasis on developments during the last five years We are honored

to have brought together in these volume some of the world s foremost experts who have provided broad leadership in advancing this field Volume 16 contains vances in two broad categories I Large Proteins Complexes and Membrane Proteins and II Pulse Methods Volume 17 contains major advances in I Com tational Methods and II Structure and Dynamics The opening chapter of volume 17 starts with a consideration of some important aspects of modeling from spectroscopic and diffraction data by Wilfred van Gunsteren and his colleagues The next two chapters deal with combined automated assignments and protein structure determination an area of intense research in many laboratories since the traditional manual methods are often inadequate or laborious in handling large volumes of NMR data on large proteins First Werner Braun and his associates describe their experience with the NOAH DIAMOD protocol developed in their laboratory

In-Cell NMR Spectroscopy Alexander Shekhtman,David S. Burz,2020-04-30 This Special Issue examines state of the art in cell NMR spectroscopy as it relates to biological systems of increasing complexity The compendia of research and recent innovations from prominent laboratories in the field of solid state and solution in cell NMR spectroscopy metabolomics and technology development are presented The work establishes in cell NMR spectroscopy as the premier method for determining the structures and interaction capabilities of biological molecules at high resolution within the delicately intricate interior of living cells and the means of utilizing cells as living laboratories to directly assess the effects of exogenous and endogenous stimuli on cell physiology
